Margaret Reiter in her individual capacity

Introduction

These comments, submitted on behalf of organizations across the country that provide free legal assistance to low-income student loan borrowers, address the Department’s proposed regulations regarding the state authorization of distance education programs. Our comments are informed by our work as legal aid practitioners. We strive to meet the legal needs of individuals

and families with limited economic means, who otherwise would be without professional legal assistance.

Margaret Reiter also joins in these comments in her individual capacity, not as a representative of any organization or agency. She was a consumer investigator with the Los Angeles County Consumer Affairs Department for four years and worked for 20 years as a consumer prosecutor with the California Attorney General’s Consumer Law Section. She investigated or prosecuted businesses engaged in many types of misrepresentations and unlawful business practices, including postsecondary for-profit schools.

The proposed state authorization regulation is of critical importance to the individuals we serve. In addition to being of limited economic means, our clients are often the first in their families to pursue higher education. They include people of color, immigrants, non-native English speakers, single mothers, veterans, and the formerly incarcerated. They are increasingly targeted by unscrupulous and predatory out-of-state for-profit schools that offer distance education programs. The state authorization regulation is critically important to ensuring that these low-income students receive the same legal protections as students attending traditional brick-and-mortar schools in the same state.

We applaud the Department’s attempt to strengthen the process for regulating distance education by closing gaps in state oversight to ensure that students, families, and taxpayers are protected while fostering efficiency in the state approval process for both states and distance education providers. To meet the goal of closing gaps in state oversight, however, the Department should go further to ensure that states are adequately able to protect their students while benefiting from processes that provide greater efficiency. We recommend specific revisions to the proposed regulation that would support this goal and create a fairer balance between deregulation for schools and protection for students and taxpayers. These proposed revisions are included as Attachment A. The remainder of this comment identifies oversight goals that should be strengthened in the final rule to ensure adequate protection of students, their families, and taxpayers, and describes how our recommended revisions to the proposed regulation would achieve these aims.

1. **Ensuring Applicability of State Consumer Protection Laws While Allowing Single State Approval**

Under the Higher Education Act (HEA), Congress enacted the state “legal authorization” requirement in order to place the primary responsibility for consumer protection from unscrupulous for-profit school practices on the states. States therefore play a critical consumer protection role. Most have enacted essential substantive legal protections against fraud and abuse in the for-profit sector. These laws and regulations include important disclosure requirements, regulation of the contents of key documents provided to students such as

---

3 See National Consumer Law Center, Student Loan Law, Sections 13.6.3.2 and Appx. M (Supp. 2016).
enrollment agreements and catalogs, prohibited practices, refund rights, cancellation rights, student protection funds or bonds to cover student economic losses in the event of school closures, private causes of action, and student complaint standards and procedures.

Currently, however, many schools that offer distance education in states where they lack a physical presence are not legally authorized by those states or are not adequately covered by those states’ oversight schemes. These schools fall into two categories in terms of state authorization:

- **Schools covered by state authorization reciprocity agreements**: Regionally accredited degree-granting schools that are based in a state that is a member of a state authorization reciprocity agreement (“SARA”) may offer distance education programs in other member states after obtaining authorization from their home states; and
- **Other schools**: Schools that are not covered by SARA (because they are (i) not based in SARA member states, (ii) wish to offer programs in states that are not SARA members, or (iii) do not meet institutional eligibility requirements for SARA) must seek approval from distant states before offering programs in those states, but only if those states require approval for institutions without a physical presence.

As explained below, under the current regulatory framework and SARA terms, most students who attend distance education programs in either of these two categories are not subject to critical state consumer protections that would be available to them if they attended brick-and-mortar schools or a distance education program based in their own state. In Section A below, we explain why distant education students need these protections. In Sections B and C, we make recommendations to strengthen the Department’s proposals to ensure that such students receive the equal protections they deserve, as envisioned by the HEA.

### A. Unlawful and Deceptive Practices by For-Profit Schools that Offer Distance Education Programs

There is no reason to conclude that for-profit online education schools are less likely than brick-and-mortar schools to engage in the types of unlawful and deceptive practices that state consumer protection laws and oversight systems are intended to protect against. Here are just a few examples of problems with for-profit companies that offer distance education:

- **As highlighted in NCLC’s December 2015 report,** a majority of the largest online education schools are owned and operated by the same for-profit companies that have been the subject of multiple law enforcement investigations and actions.
- **A 2012 investigation by the U.S. Senate Health, Education, Labor and Pensions Committee** detailed extensive misleading practices at schools owned by all of the corporations identified in NCLC’s December 2015 report.

---

4 See National Consumer Law Center, “Wake-Up Call to State Governments: Protect Online Education Students from For-Profit School Fraud” at 2 (December 2015), included as Attachment C.

Both Bridgepoint Education, Inc. and Career Education Corp. entered multi-million dollar settlements with state attorneys general based on allegations that they engaged in unfair and deceptive practices with respect to their online programs.\textsuperscript{6} In November 2015, Education Management Corp. agreed to a $100 million settlement with the Department of Education and 39 states for engaging in illegal recruiting and other illegal practices.\textsuperscript{7} The Consumer Financial Protection Bureau has sued ITT Educational Services for unfair and deceptive business practices,\textsuperscript{8} and the Department of Education has been monitoring the company’s financial status since the fall of 2015. Both of these schools offer extensive online education programs that are protected by reciprocity agreements or are exempt from state oversight.\textsuperscript{9}

As we describe in Sections B and C below, despite this evidence of fraud and abuse, the current regulatory scheme does not adequately protect most distance education students from unscrupulous for-profit companies. Not only is this contrary to the purpose and intent of the legal authorization provision of the HEA, it is unfair to distance education students and unwise for taxpayers. Online education students are equally deserving of protection from unscrupulous for-profit companies and state consumer protection laws can prevent taxpayer losses resulting for for-profit school fraud.

**B. Proposals for Schools Covered by State Authorization Reciprocity Agreements (34 C.F.R. § 600.2)**

The existing state authorization reciprocity agreements, including the Unified State Authorization Reciprocity Agreement (USARA), were drafted to ease the “costs and inefficiencies faced by [schools] that must comply with multiple state laws . . . .”\textsuperscript{10} USARA essentially provides that if the state oversight agency where the school is physically headquartered (the “home state”) approves a school, then the states where the school offers online education programs (the “distant states”) must adopt the home state’s approval as long as the school lacks an in-state physical presence. The primary benefit of a reciprocity agreement is that by obtaining home state approval the school is automatically approved to enroll students in other member states, avoiding the need to await approval through multiple state processes. This reduces the burden on both states and schools of undergoing a lengthy approval process in each state that may involve visits, reviews, and paperwork.

\textsuperscript{6} See National Consumer Law Center, “Ensuring Educational Integrity: 10 Steps to Improve State Oversight of For-Profit Schools” at Appx. A (June 2014) (hereinafter, Ensuring Educational Integrity), Attachment B to these comments. For a more up-to-date list of recent investigations, actions and settlements, see David Halperin, “Law Enforcement Actions and Investigations Regarding For-Profit Colleges,” www.republicreport.org (updated August 15, 2016).

\textsuperscript{9} See www.aionline.edu (EDMC Art Institute of Pittsburg Online); www.itt-tech.edu/onlineprograms and www.dwc.edu/onlineprograms (ITT Education Services online programs).

\textsuperscript{10} Commission on Regulation of Postsecondary Distance Education, “Draft Findings, Principles, and Recommendations” at 1 (Dec. 6, 2012).
But while this increased efficiency may appropriately benefit schools and states, reciprocity agreements are also being used to provide a more problematic benefit to online schools. Current agreements exempt online colleges—which have had a major role in drafting the agreements—from higher education state consumer protection laws that apply to brick-and-mortar colleges, at the expense of online students as well as taxpayers.

Proponents of USARA point out that the agreement does not require states to waive consumer protection laws of general applicability, such as Unfair and Deceptive Acts and Practices Acts. This is correct. USARA states, “General-purpose laws enforced by state, tribal or federal law enforcement agencies shall not be affected or superseded by any provisions of SARA.”

USARA, however, requires both home and distant states to waive consumer protection laws specifically applicable to higher education. This is a large body of significant laws: all states have enacted laws that only apply to higher education and are specifically targeted to prevent the types of abuses that are commonly engaged in by the for-profit education sector. Specifically, many state laws include refund requirements, cancellation requirements, required disclosures, prohibited practices, student protection funds or bonds to reimburse students for economic losses caused by school closures, private rights of action, requirements regarding the contents of key documents provided to students such as enrollment agreements and catalogs, and student complaint procedures. These requirements are not included in consumer protection laws generally applicable to all businesses, but are key to protecting student against fraud and abuse. Application of these education-specific consumer protection laws to online education schools that lack a physical presence in the state is expressly precluded through the following provisions of USARA:

- USARA states that the state must have “eliminated requirements for a refund unique to that state . . . and other such requirements for out-of-state institutions that do not have a physical presence within their borders and are participating in the interstate reciprocity agreement. . . .”
- USARA provides, “states will not require that institutions participating in the agreement meet additional requirements before servicing students in the state.”
- USARA states, “The state will not impose fees or other requirements on participating out-of-state institutions that were properly authorized by another state to provide distance education under the reciprocity agreement.”
- The policies and standards applicable to USARA state that “SARA policies and standards, including those for consumer protection and the resolution of complaints, apply to interstate distance education offered by participating SARA institutions to

---

12 Id. at 23.
13 Id.
14 Id.
students in other SARA states.”15 Thus, SARA’s limited consumer protections and complaint procedures appear to supersede state higher education consumer protection laws and complaint processes.

- The USARA policies and standards also provide that the home state’s resolution of complaints, including from students in other states, is final. It only allows the distant state to take action using “its laws of general application.”16

As NCLC detailed in its prior reports regarding state authorization reciprocity agreements, USARA replaces the typically stronger state consumer protection laws that specifically apply to for-profit schools with a few weak provisions in only two areas.17 First, it requires the provision of accurate information to students in several areas, such as refund policies, tuition and fees, and advertising.18 Such provisions alone are not enough to protect students from fraud. They should be supplemented by key protection provisions such as cancellation and refund rights, a mechanism by which a student and his/her state can enforce the provisions, and prohibitions against misleading and deceptive oral representations, among others. Otherwise, students are expected to protect themselves from fraud, an unrealistic expectation for vulnerable students who often face high-pressure sales tactics, a large stack of papers to review and sign in a short amount of time, and a barrage of oral misrepresentations.

Second, USARA leaves it to the home state to provide teach-outs or “reasonable financial compensation” for the education not received when a school closes.19 This means that distant state students are only entitled to payment from tuition recovery funds or bonds as provided by the home state, if anything. States vary in the financial protections they offer for closed school students. Some explicitly exempt regionally accredited degree-granting schools from complying with bond or student tuition recovery fund requirements and/or exclude out-of-state distance education students from eligibility.20

USARA also fails in all the following areas:

- Distant states may not enact refund or cancellation provisions applicable to USARA schools;

---

16 Id. at 13.
17 See Attachment B, Ensuring Educational Integrity at 17-20 and 60-62); National Consumer Law Center, “Wake-Up Call to State Governments: Protect Online Education Students from For-Profit School Fraud” at 5-6 (Dec. 2015), Attachment C to these comments.
18 USARA at 26-27.
19 Id. at 22-23.
20 See, e.g., Ariz. Rev. Stat. Ann. §§ 32-3075 (“Any person injured by a private postsecondary institution ceasing operation is eligible to submit a claim against the fund unless the person is not a resident of this state and is enrolled in distance education.”) and 32- 3072 (“Institutions accredited by a regional or specialized accrediting agency recognized by the United States department of education are exempt from this section [regarding student protection fund].”). Arizona is a member of USARA. See http://nc-sara.org/sara-states-institutions.
• USARA does not provide for any private cause of action for harmed students, and would wipe out any such cause of action in existing state law; and
• Enrollment agreement provisions, cancellation rights, prohibitions against common high-pressure sales tactics and other deceptive practices, and many other typical consumer protection provisions in state laws are not included in USARA.

USARA, as currently drafted, is severely unbalanced – it favors deregulation and ease of doing business at the expense of consumer and taxpayer protection. But USARA’s unbalanced provisions are not set in stone. The organization that is responsible for drafting USARA and the related regional agreements could revise them to be more balanced between the interests of students, taxpayers, states, and schools. We expect the organization would do so if the Department makes clear that its state authorization requirements for Title IV eligibility will not be satisfied by reciprocity authorizations that require waiver of education-specific consumer protections.

The Department’s proposed definition of state authorization reciprocity agreements strikes a fairer and smarter balance between minimizing regulatory burdens and ensuring adequate consumer protections for students. The Department proposes to allow states to rely on other states’ approvals through reciprocity agreements, but to ensure that such agreements do not require them to waive state consumer protections, including protections that specifically apply to higher education institutions. We support and urge the Department to maintain this strong, reasonable and fairer balance, as it will likely lead to nationwide change that will benefit both consumers and taxpayers.

We recommend, however, that the Department further clarify that such consumer protection laws include laws specifically applicable to higher education institutions that cover the following: disclosures to current and prospective students, the contents of any documents provided to students or prospective students, prohibited practices, refunds, cancellation rights, student protection funds or bonds, private causes of action, and student complaint standards and procedures. We also recommend that the Department clarify that schools are subject to all other state laws and regulations to which they would be subject if they were not covered by a reciprocity agreement.

We further recommend that the Department clarify that distant states that are members of SARA may receive, handle and resolve those complaints from their residents through their own state law procedures, and take action against a school for violation of its state laws pursuant to the procedures provided in its laws. This would address USARA’s two major complaint procedure problems:

• USARA requires that students first submit a grievance to the school.21 This will deter many students from filing complaints, as some students feel fearful or uncomfortable about complaining directly to the school that they believe harmed them, or because the school grievance procedure may itself be ineffective or overlong, or may result in

---

21 USARA at 20, 22, 27, 28; Policies and Standards at 12-13.
students unknowingly signing away their rights. Students should be able to file a complaint directly with their state of residence.

- USARA requires that distant states cede the power to investigate and handle complaints to the home state. If a distant state is unhappy with the resolution of the complaint, then it may appeal to the regional compact. The compact’s decision, however, is not appealable and the appeal procedures provide for no transparency to the public or to oversight agencies. This is unacceptable, given that these issues involve the constitutional due process rights of schools and students, the expenditure of public funds, and the protection of the public, including prospective and current students.

States should not be required to cede these important public functions to a private organization with no accountability or transparency to the public. Nor should students be required to complain first to the school before submitting a complaint to his/her state agency.

C. Non-Reciprocity Agreement Schools

As explained above, many schools that offer distance education in states in which they lack a physical presence are not covered by reciprocity agreements. These include: (i) schools that do not meet SARA eligibility requirements, for example schools that are not degree-granting or regionally accredited; (ii) schools who do not have their home-base in a SARA state; and (iii) schools that wish to offer distance education programs in states that have not joined SARA. As a result, the SARA provision in the proposed regulation must be supplemented by a separate state authorization provision applicable to these schools.

Based on NCLC’s review of state physical presence requirements, these schools are covered by a patchwork of state laws that, for the most part, fail to protect the students who enroll in their distance education programs. As of July 2013, only nine states regulate degree-granting and non-degree-granting for-profit schools that offer online education but have no in-state physical presence. Twelve other states regulate only a subset of schools that offer online education but have no physical presence.

In order to ensure adequate state oversight and consumer protection for these students while reducing the regulatory burden for both schools and states, we recommend revisions to section 600.9(c)(1)(i) that would essentially allow states to rely on the approval of home state. However, these institutions must continue to be subject to laws of general applicability and specific consumer protection laws, as well as the same complaint processes to which institutions with a physical presence are subject. This recommendation sets up a framework similar to that we recommend for SARA-covered institutions.

---

22 Id.
23 Id.
24 These states are Alabama, Georgia, Indiana, Kansas, Montana, South Dakota, Utah, Wisconsin, and Wyoming. See National Consumer Law Center, Student Loan Law, Appx. M (Supp. 2016).
25 These states are Arkansas, Delaware, Iowa, Kentucky, Minnesota, Nebraska, New Jersey, Oklahoma, Rhode Island, Texas, Virginia, Washington. See id.
This suggestion supports the Department’s intent that in the absence of a reciprocity agreement, students of distance education programs must be able to seek and receive action on their complaints from the authorizing agency in their state of residence. While we support this requirement, it should be clear that complaint-handling is inadequate if the state does not have the ability to enforce its decisions. **We therefore recommend** language clarifying that the state must be able to take appropriate action for state law violations.

2. **Allowing States to Withdraw Approval of a School Covered by a Reciprocity Agreement (34 C.F.R. § 600.2)**

Under USARA, a distant state has no power to deny the school participation in USARA, even if the school is violating USARA standards or the consumer protections in the distant state. In addition, once a school is approved for participation, only the home state may decide to remove an institution from USARA participation. While a distant state may contact the home state agency and request removal, the final decision rests with the home state.

If a home state refuses to take an action requested by a distant state, the distant state may ask the regional compact that administers USARA to review whether the home state has failed to comply with USARA’s standards. If the regional compact determines that the home state is not abiding by USARA, it could eject the state from USARA. If the regional compact determines that the home state is abiding by USARA, the only other solution for the distant state is the even more unlikely option: withdrawing from USARA, and thereby removing ALL that state’s schools from USARA.

Thus, while reciprocity agreements reduce burdens for both institutions and states, they can also lead to a race to the bottom as online institutions relocate to states with fewer student protections or that are less likely to enforce school regulations. Meanwhile, other states are stuck because they are unable to take any action against the school for a violation of state law or USARA standards, including important enforcement actions such as prohibiting further enrollment, putting a school on probation, or revoking approval. While the state can threaten to withdraw from reciprocity altogether, the threat will ring hollow because its own institutions, which benefit from the reciprocity, will vigorously oppose it. The state is trapped: a predatory college is enrolling state residents and the school’s home-state regulator is not addressing the problem, but the distant state is prohibited from acting due to the reciprocity agreement.

To prevent this problem, **we recommend** that the Department require reciprocity agreements to allow states to take action against individual out-of-state schools for violations of applicable state laws or USARA by following its own state law procedures, without having to withdraw from USARA or rely on the home state’s process and determination.26 This change actually strengthens the reciprocity agreement by making a race to the bottom less likely.

---

26 See Attachment A, proposed § 600.2, definition of “state authorization reciprocity agreement” subsection (c).
3. Recognizing that States May Have Legitimate Bases to Regulate For-Profits Differently than Nonprofit and Public Schools (34 C.F.R. § 600.2)

As currently drafted, SARA ties every school across the country – public, nonprofit, and for-profit – together in one agreement, with no way for a state to apply its laws and requirements to address problems at a single abusive school or set of schools without causing a breach of the entire agreement.

State and federal laws treat for-profit entities very differently from nonprofit and public entities, recognizing that these legally distinct types of entities entail distinct legal concerns. While the governing boards of for-profit entities may spend their revenue virtually without restriction, including taking the money for themselves, the corporate structure of public and other nonprofit entities is designed to provide built-in protections against self-interest. This structural difference results in contrasting behavior by colleges, with for-profits far more likely to engage in predatory practices.27

Some states may wish to adopt reciprocity agreements that recognize the approval of public and/or non-profit colleges by other states. So far, however, USARA has adopted the fiction that for-profit institutions are the same as nonprofit and public institutions, and it prevents states from making this distinction. For example, if a company based in Nevada is abusing California’s online students, and if Nevada’s authorities are not adequately responding, California’s only option would be to withdraw completely from USARA for all schools. Because of the implications of a sudden withdrawal for the nonprofit and public school systems, it is inconceivable that a state like California would ever withdraw. As a result, the Nevada school would be untouchable by California, and California’s students would be left unprotected.

States should not be forced by a reciprocity agreement to accept all of a state’s approvals without regard to sector. We recommend that the Department adopt a provision that would require that reciprocity agreements allow states to adopt reciprocity for public and nonprofit colleges without automatic inclusion of for-profit companies.28

4. Preventing Fraud Through Occupational Programs that Fail to Meet State Licensing Requirements (34 C.F.R. §§ 600.9(c)(2) and 668.50)

The Department proposes disclosure requirements to address situations in which a college’s program does not satisfy the occupational licensing or prerequisites in the state where the student lives. In these situations, however, disclosure is not an adequate solution. The proposed disclosure requirement unfairly places the burden on a student to protect herself from fraudulent representations regarding a program’s likelihood to lead to a licensed occupation. This is unrealistic for vulnerable students who often face high-pressure sales tactics, a large stack of papers to read and sign with very little time for review, and a barrage of oral misrepresentations.

27 See also Attachment B, Ensuring Educational Integrity at 23-24.
28 See Attachment A, proposed § 600.2, definition of “state authorization reciprocity agreement” subsection (b).
The only way to adequately protect such students is to prohibit using Title IV funds for programs that do not meet state licensure requirements for the subject occupation. **We recommend** that the Department enact this prohibition, allowing for exceptions for students who state, in their own words, the reason they wish to enroll despite the licensure issues (for example, an intention to relocate).\(^{29}\)

Under no circumstances should the Department allow schools to place borrowers deep into debt for an occupational program that does not meet licensure requirements for the student’s state of residence. Such an expenditure of funds makes no sense and is a waste of taxpayer money. For those few students who wish to enroll despite the licensure issues, schools can easily obtain a statement from those students.

5. **Ensuring the Effectiveness of Disclosures (34 C.F.R. § 668.50)**

Too often, problems that have been identified by states and accrediting agencies are not known to students or to consumers considering enrolling at a college. We support the Department’s intention to address this information gap by requiring disclosure of adverse actions by states and accrediting agencies, among other information.

Disclosure, however, is frequently not effective because of the method or timing of delivery, the use of jargon or legalistic language, the format of the disclosure, its level of readability, or an overwhelming amount of information. This is an especially critical issue with respect to the proposed disclosures, as they involve difficult and complicated information regarding state authorization reciprocity agreements, adverse actions, and state licensing requirements. Unless the Department carefully formats and tests these disclosures, they are unlikely to be helpful to students.

In order to ensure that these disclosures effectively communicate the most crucial information to prospective students, **we recommend** that the Department include a new provision that:

- Ensures accuracy by prescribing the form and format of the disclosures;
- Requires clear and concise disclosures;
- Requires that the disclosures be provided to prospective students at an appropriate time and location; and
- To ensure that all prospective students can understand the importance of the information provided, requires the disclosures be readable at a 6th grade level.\(^{30}\)

In addition, **we recommend** that the Department test the disclosures for comprehension by consumers who have education levels similar to the prospective students who are likely to receive the disclosures.

---

\(^{29}\) See Attachment A, proposed § 600.9(c)(2).

\(^{30}\) See Attachment A, proposed § 668.50(d).
Conclusion

Thank you for consideration of these comments. We welcome any opportunities to work with the Department in strengthening protections for borrowers. If you have any questions about these comments, please contact Robyn Smith (rsmith@lafla.org).
Legal Aid Coalition Comments on Proposed Regulations
Docket ID ED-2016-OPE-0050

Attachment A
ATTACHMENT A
Recommended Revisions to Proposed Regulations

Additions to the NPRM language are **underlined** and deletions are **stricken out**.

Amend § 600.2

**State authorization reciprocity agreement.** An agreement between two or more States that authorizes an institution located and legally authorized in a State covered by the agreement to provide postsecondary education through distance education or correspondence courses to students in other States covered by the agreement without having to obtain initial approval to operate in the other States and that does not prohibit a participating State from enforcing its own (a) does not require a State to waive its laws of general application or its specific consumer protection laws as to an institution’s offering or providing distance education in that State; (b) allows a State to include within the agreement any one or more of the following types of institutions: nonprofit, proprietary, or public; and (c) allows a state to take action pursuant to the State’s laws regarding an institution for violation of the State’s laws of general application or specific consumer protection laws, notwithstanding the institution’s approval under a reciprocity agreement.

**Specific consumer protection laws.** State laws or regulations specifically applicable to institutions regarding disclosures, the contents of any documents provided to students, prohibited practices, refunds, cancellation rights, student protection funds or bonds, private causes of action, and student complaint standards and procedures.

**Laws of general application.** State laws or regulations, including general consumer protection laws, that apply generally to persons, businesses or individuals within the State’s jurisdiction.

Amend § 600.9(c)(1)

(i) If an institution described under paragraph (a)(1) of this section offers postsecondary education through distance education or correspondence courses to students in a State in which the institution is not physically located, or in which the institution is otherwise subject to that State’s jurisdiction as determined by that State, except as provided in paragraph (c)(1)(ii) of this section, the institution must satisfy one of the following criteria for it to be legally offering postsecondary distance education or correspondence courses in that State:

(A) the institution must meet the requirements of paragraph (a) in the State in which it offers postsecondary education through distance education or correspondence courses; or
(B) the institution must be legally authorized to operate in a State where it is physically located, provided that (i) the institution remains subject to specific consumer protection laws and laws of general application of the State where the student resides; (ii) the State where the student resides may take any appropriate action regarding the institution; and (iii) the institution is subject to a complaint procedure of the State where the student resides and the complaint procedure meets the requirements of paragraph (a)(1).

The institution must, upon request, document to the Secretary the State’s approval.

(ii) If an institution described under paragraph (a)(1) of this section offers postsecondary education through distance education or correspondence courses to students in a State in which the institution is not physically located and which participates in a State authorization reciprocity agreement, and the institution is covered by such an agreement, the institution is considered to meet State requirements for it to be legally authorized to offer postsecondary distance education or correspondence courses in the State in which it lacks a physical presence, provided the institution remains subject to a complaint procedure of the State where the student resides and the complaint procedure meets the requirements of paragraph (a)(1).

The institution must, upon request, document to the Secretary the State’s approval.

Add a new § 600.9(c)(3)

If an institution described under paragraph (a)(1) of this section offers postsecondary education through distance education or correspondence courses, its programs must meet the applicable educational prerequisites for professional licensure for the occupation for which the program prepares students to enter, in the student’s state of residence, unless prior to enrollment the student affirmatively states in writing, in the student’s own words, that the student knows that the program does not meet the state licensure requirements, and explains the reason the student seeks to enroll in the program.

Add § 668.50(d)

(d) Disclosures regarding adverse actions initiated by a State or accrediting agency shall be prominent, clear and concise, and in the location, form and format which the Secretary may prescribe. The Secretary shall ensure that the disclosures are readable at a 6th grade level.

EXECUTIVE SUMMARY

The need for strong state oversight of the for-profit higher education sector has never been greater. Increasing numbers of state and federal investigations have revealed the widespread use of deceptive and illegal practices throughout the sector, including by large accredited schools owned by Wall Street investors. After being subjected to these deceptive practices, hundreds of thousands of students enrolled in inferior educational programs and ended up with nothing but debt. Despite this mounting evidence, few states have strengthened their oversight of the for-profit school industry since the publication of National Consumer Law Center’s 2011 report, *State Inaction: Gaps in State Oversight of For-Profit Education*.

Although the federal government’s continued efforts to enact minimum gainful employment standards are an important development, these standards will not be sufficient to prevent the abuses of the for-profit school industry. The state oversight role is critically important to ensuring that all students who invest in and work hard at a postsecondary education will end up with the skills and knowledge they need to improve their lives and the futures of their families. When the federal government recently enacted state authorization regulations, it recognized this critical state role and reemphasized that states are primarily responsible for school oversight and student protection.

Lax state oversight must end. This report describes ten key recommendations that states may use to develop stronger for-profit school oversight laws and agencies. If implemented, these changes will go a long way towards preventing abuses and making the for-profit higher education more accountable to states, students, and taxpayers.

**Key Recommendations**

1. **Eliminate reliance on accreditation as a substitute for oversight and require all accredited and unaccredited schools to comply with minimum standards and consumer protections.**

As of July 2013, at least 33 states applied lenient standards or granted some type of exemption or automatic approval to accredited for-profit schools. Yet, because accredited schools are the only schools eligible for federal financial aid, it is these schools’ deceptive practices that tend to cause the greatest financial harm to the largest number of students. States should therefore subject all unaccredited and accredited schools, including schools that are nationally or regionally accredited, to rigorous minimum standards and consumer protection requirements.

2. **Increase oversight of schools exclusively offering online/distance education programs.**

Although distance education is now the fastest growing segment of higher education, few states have broadened their laws to cover out-of-state schools that exclusively offer distance education. This has left growing numbers of students vulnerable to fraud,
as many of the largest for-profit distance education schools are owned by the same companies that have been the subject of multiple law enforcement investigations. States should protect students by expanding oversight laws to include for-profit schools that exclusively offer online programs. In addition, before signing onto multi-state reciprocity agreements, states should demand that those agreements, at a minimum, allow states to apply their own consumer protections to distance education schools.

3. **Establish and enforce meaningful minimum performance standards as requirements for state approval.**

The ability of a school to produce good results is a clear indication that it is not likely to be engaging in deceptive practices. To protect students from low-quality and deceptive for-profit schools, states should require schools to maintain minimum completion and job placement rates as a condition of state approval. To prevent schools from manipulating and inflating these rates, which has been a common practice, state law should clearly define these rates and mandate that the oversight agency implement a program for auditing them.

4. **Focus increased supervisory and enforcement resources on for-profit schools at risk of deceiving students.**

Many state oversight agencies lack sufficient funding to regulate for-profit schools effectively. Although increasing agency funds is one solution, agencies should also focus their limited resources on for-profit schools that are most likely to harm students. State law should require oversight agencies to develop specific criteria and procedures for identifying and investigating schools that may be engaging in systemic legal violations. The report includes a summary of specific criteria agencies could use to identify problem schools (see page 66).

5. **Require a fair and thorough process for investigating and resolving student complaints.**

Students who are harmed by for-profit schools have few ways to seek relief. As a result, schools rarely face consequences for illegal practices. It is therefore critical that state law require the oversight agency to accept, investigate and resolve student complaints. The report provides a list of key components for a fair and thorough state complaint procedure (see page 67). To ensure it has sufficient investigative resources, state law should also require the agency to expend at least 60% of its budget on investigation and enforcement.

6. **Establish an independent oversight board to increase public accountability.**

States without an independent oversight board should consider establishing one to increase public accountability, and therefore the effectiveness, of the state agency responsible for regulating for-profit schools. Because a public board is in a position to constantly pressure an agency’s staff to perform its statutory obligations, the creation of a board may lead to a more effective oversight agency as long as it is not dominated by institutional (school) representatives.
7. **Prohibit domination of the oversight board by the for-profit school industry.**

State boards dominated by educational institutions can seriously undermine the work of oversight agencies. States should therefore eliminate laws that require or allow the for-profit school industry or educational institutions to comprise the majority of oversight boards. State laws should also require a fair mix of school, employer, student, consumer advocate, public, and law enforcement representatives on oversight boards and prohibit licensed institutions from comprising a majority, including when vacancies exist.

8. **Assign responsibility for all for-profit school oversight to one agency with expertise in consumer protection and for-profit business regulation.**

The combination of postsecondary education with a profit-seeking enterprise creates a unique oversight challenge. Not only must the regulatory agency have the expertise necessary to evaluate higher education institutions, it must also have the specialized expertise necessary to handle investigations of for-profit businesses and enforce consumer protections. Furthermore, only one agency should oversee all for-profit schools. Spreading oversight among different agencies weakens the state’s ability to protect students. States should therefore vest all for-profit school oversight in a single agency with expertise in investigative procedures and consumer protection, as well as higher education.

9. **Provide a clear mandate that the state agency’s primary duty is consumer protection.**

State law must provide a clear mandate that the only or primary purpose of the oversight statute and agency is ensuring educational quality and consumer protection. Conflicting purposes or the failure to state any purpose can cause confusion among staff about an agency’s mission, provide the industry with an inappropriate level of influence over the agency, and cause the agency to neglect its consumer protection and oversight role.

10. **Eliminate sunset provisions in for-profit school oversight statutes.**

Sunset provisions, which provide for the automatic termination of a statute and oversight agency on a set date unless extended by the state legislature, should be eliminated from for-profit school oversight statutes. They can cause great harm if an agency is terminated. They also give the for-profit industry an opportunity to either water down standards or prevent the extension of a state law and agency. Rather than provide for the automatic termination of an oversight statute, state law should provide for periodic legislative reviews. Legislatures should affirmatively decide that an agency is unnecessary before that agency and its authorizing statute are terminated.
Since 2004, 27 state attorneys general and 5 federal agencies have initiated multiple investigations of and lawsuits against accredited for-profit schools. This map shows the number of state attorneys general actions per state,* but does not include information about the federal actions. The high number of investigations and lawsuits shows the urgent need for aggressive state action to rein in for-profit school fraud. Yet state legislatures and oversight agencies have done little to prevent abuses and help the hundreds of thousands of citizens harmed.

*(See Appendix A on page 38 for specifics on each state as well as actions taken by federal agencies)
This map is based on a survey of government lawsuits against and investigations of for-profit schools between 2004 and 2014, based on media reports, school announcements, or publicly available information from government agencies or courts. It is not a comprehensive map of all government actions and investigations initiated against for-profit schools during that period.
INTRODUCTION

The proliferation of recent law enforcement actions demonstrates that many for-profit schools target low-income students with deceptive high-pressure sales techniques. Despite this evidence, state governments continue to neglect their duty to protect students. Since the National Consumer Law Center (NCLC) published its State Inaction: Gaps in State Oversight of For-Profit Higher Education report in 2011,1 most states have failed to strengthen their oversight laws to crack down on illegal conduct in the for-profit industry.

Recent investigations by state and federal authorities have exposed numerous for-profit school abuses, many tied to the rapid increase of student borrowing, the aggressive push for growth, and the proliferation of large Wall Street-backed public companies. In July 2012, the U.S. Senate Committee on Health, Education, Labor, and Pensions (Senate HELP Committee) issued a report that highlighted widespread problems throughout the for-profit higher education sector.2 Among other findings, the Committee focused on the huge investment of taxpayer dollars in the industry, predatory recruiting, low completion rates, billions of dollars diverted to marketing and executive salaries, and gaming of the regulatory system to maximize profits. State and federal law enforcement actions have also highlighted the industry’s common use of high pressure recruiting methods that involve inflated job placement rates and misrepresentations about graduate wages, the transferability of credits, and the employability of graduates in occupations that require licensure.

Sources: See Appendix A
Protecting consumers from these practices requires more aggressive action by states. The stakes are high. Schools that get away with fraud and deception damage the long-term economic stability of student loan borrowers and their families. Borrowers seeking to better their lives are left with nothing but worthless credentials and mountains of debt. Those who default face a lifetime of ruined credit and the constant threat of wage garnishment, tax refund seizures, and Social Security offsets. In addition, student loan defaults damage credit ratings and impact the ability of borrowers to rent or buy homes, purchase cars, obtain affordable credit, and find employment. Ultimately, by failing large numbers of low-income students, the substandard educations and deceptive practices of for-profit schools are a drag on the larger economy.

The mounting evidence of continued abuses in the for-profit education sector demonstrates the urgent need for stronger state oversight of for-profit schools of all kinds: degree and non-degree granting, accredited and unaccredited, brick-and-mortar and online, and small schools and large national chains. This report focuses on how states can do a better job of reining in these abuses and protecting students. It is meant to assist state lawmakers, state agency staff, and student and borrower advocates in their efforts to enact laws and regulations that will increase the effectiveness of the state agencies charged with oversight of the for-profit school industry.

**An Unregulated For-Profit School Industry Reinforces Economic and Racial Inequality**

A disproportionate number of for-profit school students are low-income students and students of color. For-profit schools also target veterans, working parents, first generation students, and non-English speaking students. These students are more likely than their public or private nonprofit school counterparts to drop out, incur enormous student debt, and default on this debt. By failing to properly regulate for-profit schools, states are failing these students and helping to create a higher education system that reinforces economic inequality.

Many low-income for-profit school students have shared their stories with NCLC’s Student Loan Borrower Assistance Project. The following description is typical of those we hear from students:

“Before I started my education, I was told by the recruiters that all their students found jobs after graduation. They said that they have job placement program that will help you find jobs. . . . [T]he [for-profit school] did not help me find a job like they said. They send out weekly emails with job offers but the jobs are not even in our fields. . . . For the past 3 years, I’ve been trying to find a job in my field but I have no luck.”

— K.T., California

K.T. attended a nationally accredited for-profit school owned by a large publicly traded company. He now owes $59,000 in federal and private student loans.

In the 2011–2012 school year, 28% of African Americans and 15% of Latinos attending four-year institutions enrolled in a for-profit school, compared to 10% of whites. The two top producers of bachelor’s degrees for African American graduates in 2011 were for-profit schools: the University of Phoenix (UOP) and Ashford University (offering online programs). Similarly, UOP Online was the second top producer of bachelor’s degrees for Latino graduates in 2011–12. Although the UOP Online was the top producer of bachelor’s degrees for white graduates, it accounted for only 2% of total white graduates, while the percentages for African Americans (6.4% from UOP and Ashford combined) and Latinos (2.5% from UOP Online) were higher. Because for-profit colleges tend to be more expensive than other schools, African-American and Latino students who attend them become more indebted than their peers at other schools and typically take on more debt than their white counterparts.

Stronger minimum standards and tougher regulation of the for-profit school sector are necessary to protect the poorest Americans who seek college credentials. Some for-profit schools, however, claim that strong oversight penalizes them for providing minority and low-income students with access to educational opportunities. They essentially claim the high default and low-graduation rates result from the demographics of the populations they serve, not from their failure to provide quality educations.

Strong state oversight will not penalize for-profit schools that enroll students of color and low-income students through fair and honest business practices. Instead, we recommend that agencies focus their investigative resources on schools that make false promises and provide inferior educations. The minority and low-income students who attend for-profit schools deserve access to quality educations that provide a real opportunity to succeed. They deserve state oversight agencies that will investigate their complaints and, when violations are discovered, order the school to provide relief and take other appropriate action.

For-profit schools also claim they are no different from private nonprofit schools and should therefore be subject to the same standards. For-profit and nonprofit schools, however, have different legal obligations that lead to different motives and behaviors. Nonprofit schools are charitable organizations that have an obligation to achieve a philanthropic educational mission. They are barred from distributing excess revenues to the individuals who are in control of the school and are required to reinvest excess revenues back into the nonprofit business. For-profit schools, on the other hand, are not so constrained. They have a legal obligation to maximize and distribute profits and owe their highest fiduciary to owners and shareholders. To keep stock prices high and satisfy shareholders, publicly traded companies must demonstrate constant growth in profits.

For-profit schools’ unique conflict between distributing profits and educating students is demonstrated by the rapid growth of the for-profit education sector during the 2000s. Between 2000 and 2009, undergraduate enrollment at 4-year degree-granting for-profit schools increased by 470%, while enrollments increased by only 19% at private nonprofit schools and 30% at public schools. Enrollments at all for-profit schools increased from 766,000 in 2001 to 2.4 million in 2011. This rapid increase was due, in large part, to the availability of federal financial aid and increasing market domination by regionally and nationally accredited chains, many with stock shares traded on Wall Street. By 2009, at least 76% of the students enrolled in for-profit schools were attending schools that were either publicly traded or owned by private equity firms.

The conflict between serving investors versus serving students is also demonstrated by for-profit education companies’ excessive marketing expenditures. The 30 companies investigated by the Senate HELP Committee spent a combined total of 42.1% of all revenue on marketing and profit (22.7% on marketing, advertising, recruiting, and
Ensuring Educational Integrity

admissions staffing; 19.4% on pre-tax profit), while they spent only 17.2% on instruction. The companies spent an average of only $2,050 per student on instruction in 2009, compared to $7,239 at degree-granting public schools and $15,321 at degree-granting nonprofit schools. As just one individual example, Apollo Group, Inc., the owner of University of Phoenix (UOP), spent $2,225 per student on marketing, but only $892 per student on instruction. In December 2012 UOP was spending as much as $380,000 per day on Internet advertising.

For-profits schools’ fiduciary duty to maximize profit and demonstrate consistent growth can cause them to focus on pursuing federal financial aid dollars through increased enrollments rather than on delivering high quality educational programs. Unfortunately, as demonstrated by the proliferation of recent law enforcement actions, this focus on generating ever-growing revenues leads too many schools to engage in deceptive high pressure sales techniques while neglecting their educational mission. Strong state oversight is necessary to counter-balance the incentives created by the legal duty to generate and distribute profits to owners—a duty that does not exist in either the public or private nonprofit education sectors.

States’ Neglect of Their Primary Responsibility for School Oversight and Consumer Protection

Title IV of the Higher Education Act (HEA) provides for the regulation of postsecondary institutions through three different entities – the federal government, accrediting agencies, and states. The HEA envisions complementary purposes for each member of this “triad.” While the U.S. Department of Education is responsible for “protecting the administrative and fiscal integrity of the federal student aid programs,” accrediting agencies are responsible for assuring academic quality. Primary responsibility for approving and overseeing schools and protecting students from abusive for-profit school practices is left to the states.

The HEA does not include any minimum requirements for state consumer protection oversight. Instead, it simply provides that to be eligible for Title IV funding, an institution must be “legally authorized” by the state to provide a program of postsecondary education. Due in part to this lack of specificity, many states have come to view consumer protection as a federal and/or accrediting agency responsibility. As a result, as described in our 2011 State Inaction report, many states have abdicated their consumer protection role with respect to for-profit schools.

In 2011, due to concerns about some states’ decisions to defer oversight to accrediting agencies, the Department enacted new “state authorization” regulations to ensure that states exercise some level of oversight. In doing so, the U.S. Department of Education reaffirmed that states are “key participants” of the regulatory triad, stating “the States
should retain the primary role and responsibility for student consumer protection against fraudulent and abusive practices by some postsecondary institutions.”

There is a reason that both Congress and the U.S. Department of Education have explicitly left the student protection role to the states: Neither accreditors nor the federal government are equipped to ensure consumer protection. Accreditation is a voluntary peer-review process that focuses on helping colleges improve when they fail to meet agency guidelines, not on enforcing false advertising and consumer protection laws. The only “enforcement” tool available to an accreditor is de-accreditation, which accreditors rarely use. The federal government focuses on safeguarding taxpayer dollars and administering federal financial aid programs, not on protecting students.

State governments, on the other hand, are in the best position to monitor the everyday practices of for-profit schools and take action when those schools are harming students. States have the broadest legal authority to do so, are more accountable to the public, and are in closer proximity to the schools. While

There is a reason that both Congress and the U.S. Department of Education have explicitly left the student protection role to the states: Neither accreditors nor the federal government are equipped to ensure consumer protection.
some states do a better job of regulating for-profit schools than others, all state agencies and oversight laws need improvement. It is only through strong state action that for-profit schools will be held accountable for the deceptive practices that are rampant within the industry.

**Powerful For-Profit School Lobby Has Successfully Weakened State Laws and Oversight Agencies**

Since NCLC issued the *State Inaction* report in 2011, most state governments have failed to strengthen state for-profit school oversight. This is shocking, given the growing number of government investigations and lawsuits. Why are states unable or reluctant to act?

There may be a number of reasons. But the power of the wealthy for-profit school lobby is certainly one of the factors. The for-profit school industry has spent millions of dollars to fund lobbyist and campaign contributions.\(^{20}\)

For-profit schools have convinced many state governments to weaken state oversight in a number of ways, including by:

- allowing schools to dominate governing boards and commissions;
- investing oversight in agencies that lack sufficient expertise in regulating for-profit businesses and evaluating higher education institutions;
- enacting sunset provisions providing for the automatic termination of oversight statutes and agencies;
- exempting accredited schools or granting them approval based only on their accreditation;
- exempting schools which exclusively offer online education;
- failing to target stringent standards and sufficient resources towards for-profit schools;
- preventing the collection of adequate fees to fund agency oversight;
- removing well-defined minimum performance standards for continued licensure; and
- preventing agencies from actively investigating student complaints, taking action against schools that violate state law, and providing relief to harmed students.

It is past time for states to reverse this trend and strengthen for-profit school oversight. This report gives ten key recommendations that advocates, lawmakers, and agency staff may use to develop more effective for-profit school oversight agencies, laws, and regulations.
RECOMMENDATIONS

The following ten recommendations can help states to develop stronger for-profit school oversight laws and agencies. If implemented, these changes will deter abuses and make for-profit higher education more accountable to states, students, and taxpayers.

1. Eliminate Reliance on Accreditation as a Substitute for Oversight and Require All Accredited and Unaccredited Schools to Comply With Minimum Standards and Consumer Protections

Because accredited schools are the only schools eligible for federal financial aid, it is these schools’ deceptive practices that tend to cause the greatest financial harm to the most students. The majority of recent government actions and investigations concerning deceptive for-profit school practices have focused on accredited schools (see Appendix A). For these reasons, states should not limit their oversight to unaccredited for-profit schools. They should subject all accredited and unaccredited schools to rigorous oversight and consumer protection requirements, such as refund, cancellation, and student recovery fund provisions.

There are generally two types of institutional accreditation. Historically, regional agencies accredited degree-granting, nonprofit higher education institutions that were mainly academically oriented. They only accredited schools within their geographic regions. National accreditation, in contrast, was not based on geography. National agencies primarily accredited non-degree granting for-profit schools that offered vocational, career, or technical programs.

According to our review of state laws, as of July 2013 at least 33 states applied lenient standards or granted some type of exemption or automatic approval to accredited for-profit schools. Of these, many treat schools accredited by one of the six regional accrediting agencies with greater leniency than unaccredited or nationally accredited schools. In California, for example, the current law exempts all regionally accredited institutions from oversight and most consumer protections. The law further provides for the approval of schools by means of national accreditation, although nationally accredited schools are subject to all minimum standards and consumer protections. Only unaccredited schools are subject to full oversight in California.

States exempt regionally accredited schools based on mistaken assumptions, including that: (1) regional accreditors have rigorous standards and processes; and (2) regionally accredited degree-granting schools are less likely to engage in fraud. Historically the latter may have been true when the for-profit school industry was concentrated in nationally accredited non-degree vocational programs. However, times have changed. Now, for-profit schools are some of the largest regionally accredited degree-granting institutions in the country.

State agencies should subject all for-profit schools, including both accredited and unaccredited schools, to oversight and strong consumer protection requirements.
Ensuring Educational Integrity

Furthermore, accreditation does not provide any guaranty that for-profit schools will refrain from misleading students. As detailed in the 2012 report of the Senate Health, Education, Labor, and Pensions Committee, a number of characteristics incline both regional and national accrediting agencies towards leniency with their member schools. Both are financially dependent on the schools they accredit. Both types of accrediting agencies use a peer review process in which the very people who review schools and decide whether to grant or deny accreditation are elected by and come from other institutions accredited by the same agency. Rather than policing schools’ compliance with laws regarding false advertising, recruiting practices, and minimum standards, both types of accrediting agencies focus on helping colleges improve when they fail to meet agency benchmarks. After reviewing the track record of a number of national and regional accrediting agencies, the 2012 Senate HELP Committee report concluded that accrediting agencies’ structures and processes expose them to manipulation by institutions that are “more concerned with their bottom line than academic quality and improvement.”

Some states are reevaluating their laissez-faire policies due to new state authorization requirements enacted by the U.S. Department of Education in 2011. These regulations explicitly provide that accredited for-profit schools are not eligible for Title IV financial aid if they are “exempt from the State’s approval or licensure requirements based on accreditation.” A school is eligible only if (1) the authorizing state has a process to review and act on complaints about the school; and (2) the school is “approved or licensed by the State to offer programs beyond secondary education.” Although the U.S. Department of Education has provided little guidance

Accredited For-Profit School Leaves Student Worse Off

S. I. from Louisiana attended a regionally accredited for-profit school owned by a large publicly traded company.

“I have been a pharmacy technician for over 20 years. At age 35, I [enrolled in a for-profit school] . . . hoping to earn a better job and a better income. . . . I graduated . . . in April 2010, with a bachelor of business administration degree. . . . Unfortunately, earning my degree has sent my life in a downhill spiral. I have been unable to find employment with my business degree. . . . In addition, I have only been able to find temporary and part time work as a pharmacy technician [and] I have to commute nearly 200 miles for this current job. I can not find work where I live.

[The for-profit school] simply taught text book material. They did not teach the hands on skills needed to find employment, such as MS Excel and analyzing business data. [The school] does not provide assistance with internships [or] job placement. When I notified [my campus] that I was unable to find employment with my . . . degree they did not return my phone calls.

[My student loan debt has left a tremendous bruise on my personal life. [My boyfriend] has given me shelter through [my] unemployment and he is the only reason I am not homeless at this point. I . . . spend $400 to $600 monthly [on] my 200 mile commute to my present employer. . . . Sometimes, I try to save money on lodging . . . by sleeping in my car. The loan payment on [the private loan my boyfriend] co-signed . . . is $200 monthly. . . . After these expenses, I have little money for food clothes and medical expenses. If my wages are garnished I will not have money to commute to work. I obviously made a grave mistake going to college and trusting my future with our nation’s higher educational system.”
on what level of review a state must perform before approving a school, it expects the state “to take an active role in approving an institution and monitoring complaints . . . and responding appropriately.”

Despite the Department of Education’s intent to require more active state oversight, there is a danger that states will continue to subject accredited for-profit schools to lower standards, fewer or no consumer protections, and little or no review. For example, the California Legislative Analyst’s Office recently issued a report recommending that the legislature (1) exempt regionally accredited schools from education program reviews and general operation reviews; and (2) exempt nationally accredited schools from the “education-review components” of the California agency’s on-site inspections.

Every single school listed in Appendix A’s chart of 61 government investigations and lawsuits is either regionally or nationally accredited. The majority of the alleged abuses in each case occurred while these schools were accredited. Accrediting agencies are clearly not capable of protecting students from abusive marketing and other business practices. State agencies should subject all for-profit schools, including both accredited and unaccredited schools, to oversight and strong consumer protection requirements.

2. Increase Oversight of Schools Exclusively Offering Online/Distance Education Programs

Distance education is now the fastest growing segment of higher education. While the growth of distance education is inevitable and appropriate in many circumstances,

Ensuring Educational Integrity

distance education students are equally deserving of state protection from deceptive for-profit school practices. Allowing the for-profit distance education sector to remain unregulated will leave students extremely vulnerable to low quality online programs and fraud. Now that a significant number of students are enrolling in online education programs offered by for-profit education companies, states should expand oversight to include for-profit schools that exclusively offer online programs.

There is no reason to believe that for-profit distance education schools are less likely to engage in the types of deceptive practices used by for-profit brick-and-mortar schools. A majority of distance education schools are owned and operated by the same for-profit school companies that are the subject of multiple law enforcement investigations. The 2012 Senate HELP Committee investigation detailed misleading practices at schools owned by all of these corporations. In addition, both Bridgepoint Education, Inc. and Career Education Corp. have recently entered multi-million dollar settlements with state attorneys general based on allegations that they engaged in unfair and deceptive practices with respect to their online programs (see Appendix A).

Most states have not kept up with the distance education trend. Based on our review of state physical presence requirements, as of July 2013 only nine states regulated degree-granting and non-degree granting for-profit schools that offer distance education but have no in-state physical presence. 33 Twelve other states regulated a subset of schools that offer distance education but have no physical presence. 34 In the days when online programs were non-existent or rare, it was reasonable for states to conclude that distance education oversight was unnecessary. But times have changed.

Lack of State Oversight of Online and Distance Education Programs Leaves Borrowers to Fend for Themselves

In 2010, S.B. had been unemployed for more than six years. A single mother of four living in California, she was attracted to an advertisement about a business associate degree program. The program was offered online by a for-profit school headquartered in Virginia. S.B. called the school and signed an enrollment agreement several days later. After enrolling, S.B. discovered that her home Internet connection did not work well enough for participation in the online program. She informed the college by phone and in writing of her decision to cancel her enrollment agreement. She had never attended a single class or even logged onto the school’s website.

In mid–2014, S.B. received a call from a lawyer. The lawyer told S.B. that if she didn’t agree to start making monthly payments, her wages would be garnished. S.B. was surprised and discovered that, although she had not been served with any complaint, a default judgment of $3,000 had been entered against her. The plaintiff was a debt buyer that claimed it bought and was enforcing a debt S.B. owed to the college.

Because it has no physical presence in California, the college is exempt from oversight by the Bureau for Private Postsecondary Education. It is also not required to comply with California’s 7-day cancellation law, which allows students to cancel within 7 days and receive a 100% refund. In addition, because the college is an accredited school that has existed in Virginia for over 10 years under the same ownership, it is exempt from oversight by the State Council of Higher Education for Virginia. With no oversight agency to which she may address a complaint, S.B. has sought the assistance of a legal aid attorney.
This lack of state oversight is now leaving large numbers of students more vulnerable to fraud with few remedies. In states where distance education is unregulated, an oversight agency is unlikely to investigate complaints from its own citizens about an out-of-state online school, while an agency in the state of the online school’s physical headquarters is unlikely to investigate out-of-state complaints. These students, if harmed, are also likely to be ineligible for reimbursement from state tuition recovery or bond funds from either state (see sidebar on page 18).

The U.S. Department of Education has recognized the risk that the lack of state oversight poses to the federal financial aid program. It is currently considering regulations that would require schools solely offering distance education programs to obtain some type of authorization from each state where the programs are offered. Both states and schools are concerned about the increased compliance burden that such regulations could bring. To reduce this potential burden, the National Council for State Authorization Reciprocity Agreements (NC-SARA) and four higher education regional compacts have drafted cooperative agreements for the purposes of distance education oversight and approval, applicable to accredited degree-granting schools. NC-SARA is a private consortium of state regulators, state higher education executive officers, accreditors, school leaders, and regional higher education compacts. It is a “nationwide coordinating entity” that “assure[s] that the four regional compacts establish uniform standards and procedures” for the reciprocity agreements.

The four State Authorization Reciprocity Agreements (the SARAs) essentially provide that if the state oversight agency where the school is physically headquartered (the “home state”) approves a school, then the states where the school offers distance education programs (the “distant states”) may adopt the home state’s approval as long as the school lacks an in-state physical presence.

As currently drafted, the SARAs largely ignore consumer protection issues and focus instead on easing the “costs and inefficiencies faced by [schools] that must comply with multiple state laws . . . .” Chief among the SARAs’ deficiencies is the requirement that distant states waive their consumer protections and minimum standards specifically applicable to for-profit schools. A school offering distance education programs need only comply with the SARAs’ minimal standards and disclosure requirements. Although a home state may apply stricter consumer protections to schools that are physically present within its borders, it is unclear whether those consumer protections are exported to cover students in distant states. Even if they are, for-profit schools could avoid strict consumer protections by moving their legal domicile to a state with the most lenient consumer protection and oversight laws. Such forum shopping is not a distant possibility. Recently, a for-profit school obtained approval to operate under South Dakota’s lenient oversight laws after Virginia had revoked its approval to operate. Although an
extensive analysis is beyond the scope of this report, a summary of the primary deficiencies of the SARAs is provided in Appendix B.

The SARAs’ lack of meaningful standards and consumer protections is not surprising, given that the model language was drafted by a consortium that did not include student, consumer advocate, or state attorney general representation.41 The serious problems with the SARAs have largely gone unnoticed by state legislatures. As of May 2014, 17 states had passed laws permitting their oversight agencies to enter reciprocity agreements.42 Six others are currently considering legislation.43 Five states may not need legislation to join SARA.44 A total of seven states have already joined SARA.45 Yet, the SARAs’ unbalanced and dangerous provisions are not set in stone. Member states and those that are considering participation could demand that the SARAs be revised in a number of ways to address consumer and state interests. Recommended revisions are summarized in Appendix B.

States should protect the increasing numbers of students enrolling in distance education programs offered by for-profit schools. They should expand oversight to include for-profit schools that exclusively offer online programs. Reciprocity agreements may be useful to states and could enhance oversight, but only if they include strong consumer protections and the opportunity for robust state oversight. To the extent states want to participate in the SARA system, they should enter into reciprocity agreements only if the SARAs are revised to provide state agencies with sufficient authority to protect their citizens.

3. Establish and Enforce Meaningful Minimum Performance Standards as Requirements for State Approval

For-profit schools often inflate completion and job placement rates while misrepresenting the salaries graduates can expect to earn. These deceptive practices are among the most abusive and harmful to students because they go to the heart of students’ hopes and dreams, and leave students mired in debt. A primary way that states can protect students from low-quality and deceptive for-profit schools is to require that the schools maintain minimum completion and job placement rates as a condition of state approval to operate.

Students who enroll in for-profit schools typically do so for only one reason—to obtain higher-paying employment to improve their lives and the lives of their families. Indeed, for-profit schools that participate in federal student aid programs are required by law to provide an eligible program of training to prepare students for gainful employment.46 For this reason, the for-profit education sector aggressively markets its schools as gateways to employment (see Appendix C). According to the recent complaint filed by the California Attorney General against Corinthian Colleges, Inc., for example, Corinthian’s “marketing studies show that student ‘[e]nrollment largely hinges on selling affordability & [job] placement.’ . . . ‘Our students come to us primarily to gain skills and find a position that will help them to launch a successful career.’”47
Despite the need for minimum placement and completion rate standards, there are no nationwide standards in most circumstances. The U.S. Department of Education has recently proposed gainful employment standards, but these new proposed standards do not include minimum placement rates or completion rates. The proposed standards instead focus on program cohort default rates and graduate debt-to-earnings rates. The Department of Education proposes only to require schools that offer career education programs, including all for-profit schools, to disclose completion rates as well as placement rates to the extent a state or accreditor requires the schools to calculate them.\(^48\)

The Department of Education requires minimum placement and completion rates only for a subset of programs with 300 to 600 clock hours of instruction during a minimum of 10 weeks. To be eligible for Direct Loans, those programs must have a completion rate of at least 70% and a job placement rate of at least 70%.\(^49\) A few states have also set minimum performance measures. Tennessee, for example, has a minimum placement rate of 67% and a minimum completion rate of 75%.\(^50\) In 2013, the Wisconsin Education Approval Board considered adopting a minimum placement rate of 60% and a minimum completion and transfer-out rate of 60% based on its statutory authority to enact minimum standards. The Board, however, suspended the committee which was charged with considering these minimum rates. According to media reports, this decision was based in part on pressure from the for-profit school industry.\(^51\)

For minimum completion and placement rates to be effective, state statutes must specifically define (1) which graduates may be counted as completers and (2) what employment may be counted as a placement. The less specific the definitions, the easier it is for schools to manipulate them to their advantage. For example, in a complaint against Corinthian Colleges, Inc., the California Attorney General alleged that two Everest College campuses (owned by Corinthian) placed numerous graduates with temporary agencies (some for only two days of employment), specifically to count them as placements.\(^52\) The Attorney General of Massachusetts made similar allegations in a recent lawsuit against Corinthian, quoting one former employee as stating, “Corinthian’s policy is that a student is considered ‘placed’ once that student has been employed for at least one day.”

### 7 Years and Counting: Still Searching for Fulltime Job

A.M. from Minnesota attended a regionally accredited for-profit school owned by a publicly traded company. She owes $125,000 in federal and private student loans.

“[My for-profit school] stated a . . . 98% job placement rate . . . In the past 7 years (since graduating) the most I have made at any job was $14/hour (and this was an accounting job, my major was photography). Now I have 4 part time jobs, only one is photography related . . . I have become hopeless that my loans will ever be at a monthly payment that I can make and still pay for food, gas, and rent. . . . I wish i could tell all of the high school students of the US to research and be careful to check and double check what banks and schools promise, they don’t care about you or your well being, they are only in it for themselves and their company.”

In her recent lawsuit against Corinthian Colleges, the Attorney General of Massachusetts quotes one former employee as stating, “Corinthian’s policy is that a student is considered ‘placed’ once that student has been employed for at least one day.”
ensuring educational integrity

considered ‘placed’ once that student has been employed for at least one day.53 These are just two of many law enforcement actions involving similar allegations (see Appendix A).

For the purpose of calculating job placement rates, except for the programs mentioned previously with 300 to 600 clock hours of instruction for at least 10 weeks, there is no standardized national definition of what employment may be considered a job placement. The U.S. Department of Education has not adopted a standard definition and is unlikely to do so anytime soon: it has left this task to the states and/or accrediting agencies. National accrediting agencies each have their own vague definitions while regional accrediting agencies have no definition because they do not require schools to measure job placement rates.

For the purpose of calculating completion rates, the definition proposed by the U.S. Department of Education for the gainful employment disclosures has a number of flaws that states may improve. As one example, there are four separate completion rates that must be disclosed.54 Two of the rates are based on full-time students who complete within 100% and 150% of the length of time to completion. The two remaining rates are based on part-time students who complete within 200% and 300% of time to completion. Not only are these rates confusing, but they only include students who receive Title IV financial aid. This will leave out veterans who use only G.I. Bill funds and students who pay their tuition with private loans, institutional loans, state grants or loans, or other funds. The potential result? Misleading and inaccurate completion rates. In addition, minimum completion rates should be based on one measure using the length of time in which students expect to complete. In most cases this will be the amount of time the school represents is necessary for completion. A list of the key components any job placement and completion definition must include is provided in Appendix D.

Precise definitions, however, will not prevent schools from manipulating placement and completion rates. The vast majority of recent law enforcement investigations and actions have included allegations that for-profit schools inflated one or both. Because these rates are self-reported, they must be continuously monitored and audited by oversight agencies to ensure their accuracy.55 Agencies could randomly audit schools’ completion and placement rates or they could target their audits towards schools that pose the most risk to students. They could identify schools most likely to inflate rates by targeting schools with program placement or completion rates higher than the industry average.

broken promises, broken dreams

M.K. from Illinois went to a nationally accredited for-profit school owned by a large publicly traded company. She owes $122,000 in private and federal student loans.

“My for-profit school promised that after graduation they would help us find a job. I did not complete a 4 year degree to work in the mall and make minimum wage! I am a single mom, make a below average living and am struggling each and everyday to make each payment. Since when is it a life long punishment to get an education? Where is the relief...?? The type of job I went to school for has additional requirements that were not provided by my school... They promised the world when enrolling, and in the end every promise was broken.”
or by auditing schools with rates above a specific threshold, for example schools with a placement rate of 80% or higher. In addition, schools should be required to maintain substantiating records for at least 5 years, if not longer.

The ability of an institution to produce good results is a clear indication that it is less likely to engage in deceptive practices. It also predicts whether students will receive a valuable education and employment or end up with debt they cannot afford to repay. States should require for-profit schools to maintain minimum completion and job placement rates as a condition of state approval. For such minimum rates to be effective, they must be supplemented by a statutory requirement that oversight agencies audit these rates randomly or by targeting schools with characteristics that indicate they may be inflating their placement or completion rates.

4. **Focus Increased Supervisory and Enforcement Resources on For-Profit Schools at Risk of Deceiving Students**

Many state oversight agencies lack sufficient funding to regulate for-profit schools effectively. Although the most obvious solution is to increase agency funding through increased school fees, this may not be possible in many states. To perform oversight effectively with limited resources, agencies should focus on those schools that are most likely to harm students: for-profit schools.

An enormous amount of evidence demonstrates that the for-profit education sector is the only higher education sector that has a long history of engaging in widespread consumer fraud, a practice which continues to this day (see Appendix A and the 2012 Senate HELP Committee report). Multiple government reports, investigations and lawsuits document for-profit schools’ troubling history, beginning with a scathing 1992 report from the Senate Permanent Subcommittee on Investigations finding widespread fraud throughout the for-profit school sector. States ignore this evidence at the peril of the most vulnerable of their citizens: the low-income and minority people who comprise most of the for-profit school student population. Because of its fiduciary duty to generate and distribute profits to investors or owners, the for-profit education sector poses the greatest risk to both students and taxpayers. It is this sector that is most likely to engage in fraudulent and deceptive practices.

Disillusioned and Losing Ground

A.M. from Arizona attended a nationally accredited for-profit school owned by a large publicly traded company. She owes over $100,000 in federal and private student loans.

“I graduated from culinary school . . . I was told chefs make GREAT money, just sign on the line. After several low paying jobs, I found myself pregnant, unemployed, and out of forbearance options. . . . Today, I take care of my two kids, by myself, and am having 25% of my income from my full time employer garnished. I was under the impression that I would be a ‘Chef’ when I graduated and I would be making good money . . . no one told me it would be YEARS before I made a living wage.”
States should therefore target oversight toward for-profit schools, including more stringent standards, review requirements, and consumer protections. Some states have already taken this step.57 State agencies should also have some procedure for identifying for-profit schools that may be engaging in systemic legal violations. Agencies could use criteria to identify schools that may pose a significant risk to students and target their resources towards monitoring and investigating these schools.

For key criteria an agency should consider, see Appendix E. When a school meets one or more of the criteria, the agency could take a number of actions, including conducting an audit of its placement or completion rates or conducting a more thorough school review, including unannounced site visits or unscheduled program reviews. With shrinking state budgets, it is crucial that states focus their limited resources on for-profit schools, as these are the schools most likely to engage in deceptive and illegal practices.

5. Require a Fair and Thorough Process for Investigating and Resolving Student Complaints

Students who are harmed by for-profit schools have limited ways to seek relief. As a result, schools rarely face consequences for illegal practices. Although some state attorneys general have been increasingly active, their ability to address for-profit school abuses is limited; investigations of and actions against for-profit schools are time and resource intensive. Therefore, it is critical that state oversight agencies develop responsive and robust complaint investigation and resolution processes. The state agencies are in the best position to investigate individual complaints, obtain relief for students when a school violates the law, and take appropriate action when a sufficient number of complaints indicate a school is engaging in widespread violations.

Students harmed by for-profit schools have few options for relief. Attorneys are often unwilling to take their cases due to the widespread use of restrictive arbitration provisions and the lack of private causes of action in oversight statutes.58 In addition, neither accrediting agencies nor the U.S. Department of Education have responsive or accessible student complaint procedures. Although the federal regulations require that accrediting agencies review student complaints,59 accrediting agencies rarely initiate adverse actions against for-profit

---

Because of its fiduciary duty to generate and distribute profits to investors or owners, the for-profit education sector poses the greatest risk to both students and taxpayers.

No Job but On the Hook for $43,000

G.S. from Iowa attended a nationally accredited school owned by private investors. She owes over $43,000.

“I went to [a for-profit school] to learn how to be a Medical Assistant. . . . After I graduated, the school didn’t help me find a job . . . I work for two temp services with limited hours. I have a lot of trouble keeping up with all of the bills. I recently caught up my heating bill. . . . I think that the degree was worthless and didn’t help me at all. “
schools or require them to provide student relief based on complaints. For example, one regional accrediting agency informs complainants: “Remember that the Commission cannot assist you in . . . arranging for a refund of tuition, . . . seeking reinstatement to an academic program, etc.” And the U.S. Department of Education does not offer any complaint form or dedicated website that will accept student complaints. Although students may file complaints with the Department’s Office of the Inspector General, it does not have any obligation to investigate student complaints nor does it have authority to resolve them.

Given the inadequacy of the complaint processes offered by accreditors and the U.S. Department of Education, the Department has determined that a state process to review and act on complaints is critical to the state’s oversight role. The Department views state authorization as a “substantive requirement where the State is expected to take an active role in . . . monitoring complaints from the public . . . and responding appropriately.” Therefore, the Department’s regulations provide that an institution is “legally authorized” by a state only if the state “has a process to review and appropriately act on complaints concerning the institution . . . .”

State complaint procedures that obligate oversight agencies to review every student complaint and provide for their thorough investigation and resolution are in the best interest of oversight agencies and schools. They allow agencies to discover and take action against those schools that are unfairly competing through illegal activities, promote the credibility of legitimate schools, and help agencies to ensure that schools are meeting minimum statutory standards. In addition, thorough investigation and complaint processes help agencies to target their limited resources towards monitoring and auditing the schools that pose the most risk to students.

Unfortunately, many state agency complaint procedures are deficient. The California Bureau for Private Postsecondary Education is one example. The State Auditor recently issued a report finding that the Bureau for Private Postsecondary Education “consistently failed to meet its responsibility to protect the public’s interests,” based in part on the Bureau’s failure to appropriately respond to student complaints. The State Auditor found that the California Bureau for Private Postsecondary Education:

1. had almost 780 complaints outstanding as of October 2013, and that 546 of these had been outstanding for more than 180 days;
2. failed to prioritize complaints based on their severity so as to ensure that institutions quickly resolved the most serious violations;
3. took an average of 254 days to close complaints; and
4. had closed complaints prematurely, without receiving confirmation that the institutions had resolved the problems in question.
The Auditor had several recommendations, including that “the bureau should work with [the California Department of] Consumer Affairs to establish an investigative training program [in order] to ensure that it identifies and obtains sufficient evidence before closing complaints.”63 Many other state agencies have received similar criticisms.64

A state statute should require an agency to accept, investigate, and resolve student complaints regarding schools, their employees, and independent recruiters. To ensure an agency has sufficient investigative resources, the statute should also require the agency to expend at least 60% of its budget on investigation and law enforcement. At a minimum, the complaint process should include each of the points described in Appendix F.

The agency should also be required to submit annual reports to its board and the legislature regarding numbers and types of complaints received, average time to resolution, investigative tools used (for example, how many unannounced visits, witness interviews, etc. were conducted in investigations), how the complaints were resolved, and the number and qualifications of investigative personnel compared to the total number of students enrolled in regulated institutions.

6. Establish an Independent Oversight Board to Increase Public Accountability

States without an oversight board should consider establishing one to increase public accountability, and therefore the effectiveness, of the state agency responsible for regulating for-profit schools. Many states have created a board or commission that works with and advises the oversight agency. These boards are typically responsible for deciding whether to approve a school for licensure or take action against a school that has engaged in illegal conduct. They are also charged with promulgating minimum standards and consumer protection regulations.65 In addition to these statutory functions, a board can continuously pressure an oversight agency to meet its statutory responsibilities. It can also serve as a voice for the agency when it needs additional resources from the state government.

A number of states, however, have not established a board or commission to work with the state agency and make regulatory decisions.66 Outside of occasional legislative reviews, these agencies have no continuing accountability to any independent public entity. This lack of constant accountability can lead to the neglect of oversight and consumer protection responsibilities. California’s for-profit school oversight history demonstrates this problem (see box on next page).
The Need for an Independent Oversight Board: Lessons from California

California’s initial law for oversight of for-profit schools provided for an independent board called the Council for Private Postsecondary and Vocational Education. The Council was established in 1990 to protect students from financial aid abuse and dishonest recruitment practices in the for-profit school sector. In a 1995 review, the California Postsecondary Education Commission (CPEC) found that the Council had enforced consumer protection provisions and that complaints against schools had decreased because of the Council’s ability “to respond rapidly to the first complaint about an institution and conduct an investigation before repeated or similar complaints occur.” While CPEC did specify a number of ways that the Council could improve, it concluded that the Council was one of the most “rigorous regulatory agencies in the nation” and had “made significant headway in the past four years in fulfilling the mission of the” statute.

The Council, however, was abolished in 1997 after the governor vetoed legislation that would have continued its existence. The legislature replaced the independent Council with an agency within the state’s Department of Consumer Affairs. Since that time, the legislature has only reviewed the oversight agency once every five years. The entities or individuals who have conducted reviews at the legislature’s request have consistently concluded that the California agency has done a poor job of meeting its statutory consumer protection mandate. If the Council had not been abolished in 1997, California might have maintained rigorous and effective oversight of the for-profit school industry.

7. Prohibit Domination of the Oversight Board by the For-Profit School Industry

State boards dominated by educational institutions can seriously undermine the work of oversight agencies. States should not require or allow the for-profit school industry or educational institutions to comprise the majority of oversight boards. States should instead require a fair mix of school, employer, student, consumer advocate, public, and law enforcement representatives on oversight boards. States should prohibit licensed institutions from comprising a majority, including when vacancies exist.

As discussed in Recommendation No. 6, oversight boards are often responsible for deciding whether to approve or take action against schools as well as enacting regulations and standards. Domination of a board by industry can therefore seriously undermine a state agency’s ability to regulate for-profit schools and protect consumers. When a majority of
a board’s members represent the interests of educational institutions, it is unlikely to take any adverse action against a school or enact stringent standards or regulations. A recent decision of the Wisconsin Education Approval Board illustrates this point (see sidebar).

As highlighted in NCLC’s 2011 State Inaction report, Wisconsin is not alone. Many other state oversight boards are also dominated by for-profit school industry representatives. Some states even require that a majority of the members of a regulatory board come from the industry. Other states allow the governor and/or the legislature to appoint members without any statutory limits to the number of industry representatives that may be appointed. Even when those limits exist, industry may still dominate when board openings are left vacant.

To create an effective oversight agency, states should not require or allow educational institutions to dominate oversight boards. They must also ensure that licensed institutions do not comprise a majority, even when vacancies exist. When boards do not include a fair mix of all stakeholders—with school, employer, student, consumer advocate, public and law enforcement representatives—the oversight agencies will likely be crippled by the interests of the for-profit school industry.

8. Assign Responsibility for all For-Profit School Oversight to One Agency with Expertise in Consumer Protection and For-Profit Business Regulation

The combination of postsecondary education with a profit-seeking enterprise creates a unique oversight challenge. Not only must the regulatory agency have the expertise necessary to evaluate higher education institutions, it must also have the specialized expertise necessary to handle investigations of for-profit businesses and enforce consumer protections. Furthermore, only one agency should oversee all for-profit schools. Spreading oversight among different agencies, none of which has all the components of the necessary expertise, weakens the state’s ability to protect students from schools that provide inferior educations and engage in deceptive practices.
Too many state agencies charged with oversight of for-profit schools have no experience conducting investigations of for-profit businesses and enforcing consumer protections. In some states, the agencies charged with oversight are also charged with setting priorities for the entire state higher education system. In other states, the oversight agency is also charged with serving as a financial aid resource for students, overseeing both elementary and secondary education, or developing a skilled workforce and administering federal workforce development funds. In one state, the Secretary of State is charged with oversight.

Agencies that do not combine expertise of higher education and for-profit business oversight are typically ill-equipped to investigate and take action against unscrupulous for-profit schools. Such agencies often lack staff with expertise and training in:

1. false advertising and unfair and deceptive practices laws applicable to for-profit businesses,
2. law enforcement and investigation methods, and
3. due process and administrative law requirements applicable to proceedings against regulated businesses.

In addition, some states split oversight of for-profit degree-granting and non-degree granting schools between two different state agencies. States often base this decision on the mistaken rationale that regionally accredited for-profit schools that grant degrees need less oversight. Because both types of schools warrant the same level of oversight and both agencies should have the same type of expertise, splitting oversight is inefficient and often leads to weaker oversight of degree-granting schools.

To effectively prevent the operation of low-quality and deceptive for-profit schools, states should vest all for-profit school oversight in one state agency. This agency should have expertise in higher education, investigative procedures, and consumer protection.

9. Provide a Clear Mandate that the State Agency’s Primary Duty is Consumer Protection

State law must provide a clear mandate that the only or primary purpose of the oversight statute and agency is ensuring educational quality and consumer protection. Conflicting purposes or the lack of any stated purposes can cause confusion among staff about an agency’s mission. It can also provide the industry with an inappropriate level of influence over the agency and cause the agency to neglect its consumer protection and oversight role.

Some statutes, for example, provide that the oversight agency has an equal purpose of protecting or encouraging for-profit schools. For example, the Florida statute contains conflicting legislative intentions for the Commission for Independent Education, including to aid in both: (1) “protecting independent postsecondary educational institutions”

To more effectively protect students from low-quality and deceptive for-profit schools, states should vest all for-profit school oversight in one state agency. This agency should have expertise in higher education, investigative procedures, and consumer protection.
and (2) “protecting the health, education, and welfare of persons who receive educational services from independent postsecondary educational institutions.”

The Utah Postsecondary Proprietary School Act states that it is the “policy of the state” to: (1) “encourage private postsecondary education;” (2) “avoid unnecessary interference by the division with internal academic policies and management practices of” institutions; and (3) “protect students and potential students from deceptively promoted, inadequately staffed, and unqualified proprietary institutions and programs.” Other statutes are silent on the purposes of the statute or the agency.

And, although the Texas Workforce Commission (the TWC) is charged with oversight of private postsecondary schools, this is not its primary mission. It is also responsible for administering unemployment benefits, overseeing community colleges, addressing employment-related civil rights claims, and working with the for-profit industry to develop a skilled workforce. Given this long list of disparate responsibilities, it is not surprising that in 2011 the TWC was caught unprepared when a local news outlet revealed that schools owned by ATI Enterprises, Inc. lied about job placement rates. Only after receiving harsh public criticism did the TWC take action against ATI.

Unlike these states, other state statutes provide a clear consumer protection mandate. The California statute, for example, provides that “the protection of the public shall be the [Bureau for Private Postsecondary Education’s] highest priority. If protection of the public is inconsistent with other interests to be promoted, the protection of the public shall be paramount.”

10. Eliminate Sunset Provisions In For-Profit School Oversight Statutes

State legislatures occasionally insert sunset provisions in statutes. A sunset provision automatically repeals the statute on a set date unless the legislature takes action to extend it. In a few states, sunset provisions provide for the automatic termination of the for-profit school oversight statute and agency on a set date unless extended by the state legislature. Sunset provisions regarding oversight of for-profit schools are unnecessary and can cause great harm to students.

There are a number of reasons sunset provisions are unnecessary and counterproductive. In most circumstances, a legislature may review an agency and repeal legislation at any time, whether or not a sunset provision exists. If a legislature would like to ensure a periodic review, it can do so without providing for the automatic termination of a statute.

It is the automatic termination provision that puts pressure on an agency to keep the for-profit school industry happy. Because the industry lobby has enormous influence with state legislators, agencies that actively investigate and take action against schools are at risk of disappearing every time the sunset date approaches. For this reason, the industry views sunset provisions as opportunities to push for the revocation of strong consumer protections and standards.
In addition, when a statute sunsets, students are left unprotected. If a new law is eventually enacted, a subsequent agency must hire and train staff, draft regulations, and start operations from scratch — a process that can take years and leave students unprotected for even longer periods of time. California’s statute, for example, expires every five years unless the legislature decides to extend the sunset date.\textsuperscript{91} In 2007, the for-profit school industry mounted a successful assault on what was once the toughest for-profit school oversight statute in the country.\textsuperscript{92} The statute expired, the agency was terminated, and a new law did not go into effect until January 1, 2010.\textsuperscript{93} For over two years, California for-profit school students were left without consumer protections, without an oversight agency to investigate complaints, and without access to a student tuition recovery fund in the event of school closure, among other things. According to a recent audit, the new California agency has been slow to enact regulations, has taken a year or longer to process complaints, and has failed to prioritize complaints regarding practices that put students at risk.\textsuperscript{94}

For these reasons, sunset provisions should be eliminated from for-profit school oversight statutes. They serve little purpose other than providing the for-profit industry with an opportunity to either water down standards or prevent the extension of an agency’s existence. Rather than provide for the automatic termination of an oversight statute, legislatures should provide for periodic reviews and affirmatively decide that an agency is unnecessary before that agency and its authorizing statute are terminated.
CONCLUSION—WHAT’S NEXT?

The need for aggressive state action and strong oversight of for-profit schools is urgent. States’ laissez-faire attitude to for-profit school oversight must end. It is time for states to face the facts, both for the sake of protecting students and taxpayers and for the sake of creating a healthy economy. Strong state laws and active oversight agencies are needed to counterbalance the for-profit industry’s fiduciary duty to produce and distribute profits to investors. Without strong laws and agencies, students and their families will continue to suffer the long-term economic consequences of deceptive recruitment techniques and inferior educations.

Change is possible, but it will not come without the coordinated efforts of local stakeholders: the for-profit school students and graduates themselves; student and consumer advocates; nonprofit organizations that provide services to the non-traditional students who typically attend for-profit schools; and state attorneys general. If state lawmakers and agency staff are to take on the powerful for-profit school lobby, they need the backing of a coalition of advocates who are knowledgeable about these complex issues and committed to a long-term strategy for change.

This report and its detailed recommendations are intended to help local advocates who seek change. We also hope that it will spur states and oversight agencies to recommit themselves to protecting their citizens from being preyed upon by unscrupulous for-profit schools.

APPENDIX B

PROBLEMS WITH STATE AUTHORIZATION RECIPROCITY AGREEMENTS AND HOW TO FIX THEM

Unfair Reciprocity Agreements: Protecting Fraudulent On-Line Schools from State Oversight

As currently drafted, the four regional state authorization reciprocity agreements (collectively referred to as SARA), contain the following anti-consumer, anti-state oversight provisions:

- **Accreditation in Lieu of State Standards:** The home state must accept institutional accreditation as sufficient initial evidence of academic quality for approving schools’ participation in SARA. Distant states may not apply more stringent minimal standards to SARA schools.

- **Treatment of Public, Private Non-Profit and Private For-Profit Schools as If They are the Same:** SARA does not allow a state to sign onto SARA for some types of schools while opting out for those schools it decides pose a higher risk to its citizens.

- **Waiver of State Consumer Protection Laws:** A distant state must waive its oversight laws with respect to covered schools. The state only retains the ability to use general criminal or consumer protection laws against them, such as Unfair and Deceptive Acts and Practices (UDAP) statutes.

- **Lack of Consumer Protections:** SARA only requires that schools provide accurate information to students regarding a number of areas, including refund policies and accreditation. Distant states may not apply more stringent consumer protection provisions to SARA schools:
  - **Student Recovery Funds/Bond Provisions:** It is up to the home state to provide for teach-outs or for “reasonable financial compensation” for the education not received when a school closes. This means that distant state students are only entitled to payment from tuition recovery funds or bonds as provided by the home state, if anything.
  - **Refunds and Cancellation Provisions:** Distant states may not enact refund or cancellation provisions applicable to SARA schools. It is unclear whether a home state’s refund and cancellation rights would be exported to cover distant state students.

---

- **Private Cause of Action**: SARA does not provide for any private cause of action for harmed students, and would wipe out any such cause of action in existing distant state law.

- **Enrollment Agreements, Disclosures, Language Provisions, Private Rights of Action, Prohibitions Against Deceptive Practices**: These and many other typical consumer provisions in state oversight schemes are not included in SARA.

- **Programs that Lead to Licensure**: SARA allows covered schools to offer programs that lead to a licensed profession in distant states even when the programs do not qualify students for licensure in that state. SARA only requires that schools disclose that the program does not meet state licensure requirements.

- **Inadequate Student Complaint Procedures**: SARA requires students to first try to resolve a complaint with the school through its internal grievance procedure. Only after going through this procedure may a student then submit a complaint to the home state. Although the distant state may work to resolve the complaint, only the home state may make the final decision.

**Balanced Reciprocity Agreements: Revisions for Fairness to States and Students**

To more equitably address consumer, state, and school interests, SARA could be revised to provide that the distant state will retain the following rights:

- the authority to apply stricter consumer protections to distance education programs, including prohibitions targeted to unfair and deceptive business practices, disclosure requirements, student cancellation and refund rights, student tuition recovery fund provisions, private causes of action, and requirements for enrollment agreements and other important documents.

- the authority to sign onto SARA for some types of schools, but to opt out for types of schools that pose a higher risk to its citizens.

- the jurisdiction to limit or deny approval, or take any other appropriate action, in the event it determines that the school has failed to meet the minimum SARA standards, its own minimum standards, or violated any state law or regulation.

- the responsibility for accepting, investigating and acting on complaints from distant state students (up to and including revoking a school’s state authorization), and the school should be required to cooperate with any investigation.

- the right to impose its own record retention requirements, require the school to provide annual data regarding distant state students, and to inspect documents, conduct announced or unannounced site visits, speak with students and employees, and require the school to comply with any other informational requests or audits.

- the right to require that the school notify it in whatever circumstances it deems necessary, for example if ownership or control changes, an accrediting agency proposes to take an adverse action, a law enforcement agency starts an investigation or files an action, etc.
- the authority to charge the school adequate fees to fully fund its investigative oversight.
- the authority to review the school for compliance with any stricter state standards and/or use its more active processes to ensure that a school meets SARA or its standards. For example, if the home state simply accepts accreditation as sufficient for approval and the distant state requires a more in-depth review to ensure that the school satisfies the standards, such as through document review or site visits, the distant state should be able to visit the physical location of the campus, request that the school submit information, and take other actions it deems necessary to grant approval through SARA.
APPENDIX C

SAMPLE FOR-PROFIT SCHOOL ADVERTISEMENTS

University of Phoenix
- “An education that helps prepare you with the skills and knowledge you’ll need for professional life after the military.”
- “Imagine if everything you did led to the career you wanted. Dare to dream. Put your passion into education. Strive for excellence.”

DeVry University
- “90% of DeVry University grads actively seeking employment had careers in their fields within six months.”

Ashford University
- “When you pursue a higher education, you are setting out to create a new future for yourself. It is through your investment in knowledge that you will find the profits of life. You can pursue a promotion at work or a new career. You can inspire loved ones to follow in your footsteps. You can awaken a desire to never stop learning. And you can feel fulfilled in your great achievement.”

Daymar College
- “If you’re ready to take the next step toward a successful future, Daymar College can help you get there! At Daymar, We Change Lives . . . One Person At A Time.® Our career-specific education programs can prepare you for an exciting new career that can help you build a better life for you and your family. If you’ve always dreamed of a better future and the security that comes with an education you can always fall back on, enroll at Daymar College now.”

APPENDIX D

KEY COMPONENTS FOR CLEAR JOB PLACEMENT AND COMPLETION RATE DEFINITIONS

Job Placement:

- **What types of jobs may be counted as placements?** The job title should match that provided on the certificate or degree or the work routine should predominantly require the use of core skills and knowledge expected to have been taught in the program. This would help prevent schools from manipulating placement rates by counting jobs that are not related or only tangentially related to the occupations trained for. In instances where the completers are continuing in prior employment, the prior position must be reasonably related to the program training and the completer must attest in his/her own handwriting at the time of enrolling and after completion that the training led to maintaining or advancing in his or her position.

- **How soon after graduation must a student obtain employment?** Within six months, since that is the point at which most students must start making their federal student loan payments. This should be adjusted for occupations which require licensure or private certification, with the six-month period starting on the date when the results of the first licensure or certification examination is reasonably available to students after they graduate.

- **How long must employment last in a single job?** Minimum of 13 weeks continuous employment in a single job. Otherwise, schools may count temporary jobs of short duration or accumulate time periods for different jobs that a graduate is not able to keep because he lacks the necessary skills.

- **Are part-time or full-time jobs counted?** Full-time employment should be defined as a minimum number of work hours per week, for example 32. Part-time should only be counted if the student, in his own handwriting, states that he only intends on finding part-time employment upon graduation. Most students enroll in order to obtain full-time employment and will therefore consider the placement rates to accurately reflect students who have obtained full-time employment.

- **Which students are eligible to be counted?** Only those students who complete their programs. Students who have not completed their programs should not be included in this calculation.
Completion:
- **Which students should be included in the completion rate calculation?** The denominator should be the total number of students who enroll within a defined one-year time period.
- **Which of these students may be counted as graduates?** The numerator should only include those who complete their programs within 100% of the original time scheduled to completion when they enrolled. Some schools misrepresent both the time to completion and, as a result, the cost of obtaining a certificate or degree. Schools should not benefit from these misrepresentations with inflated completion rates that include graduates who completed in some greater time period, such as 150% of the represented time to completion. Most students will expect that the completion rate will reflect the 100% rate.
- The numerator should also include students who are able to transfer their credits to another program.

Both Job Placement and Completion:

**Exclusions:** Schools should be allowed to exclude only a few categories of students—those who are unable to complete or obtain employment due to:
- death;
- disability;
- military service;
- continuing education at least half-time (for the placement rate only); or
- incarceration.
APPENDIX E

KEY CRITERIA FOR IDENTIFYING SCHOOLS THAT MAY BE ENGAGING IN SYSTEMIC FRAUD

- The nature and severity of violations alleged in student complaints, the extent of potential harm to the student (for example, failure to make required refunds, misrepresentations regarding the likelihood of employment or earning ability after graduation), and evidence of similar violations subsequent or prior to the complaint under consideration;
- Whether the school receives more than 70% of its revenues from Title IV and other federal funding sources (such as benefits for service members or veterans);
- Whether the school’s 3-year cohort default rate is above 15%;
- Whether the school has placement rates, completion rates and/or licensure or certification rates that are far higher or lower than comparable programs offered by other for-profit schools;
- Whether a school spends more revenue on marketing, recruitment and advertising than on instruction;
- Whether the school has experienced a dramatic increase in enrollment, has recently expanded its programs or campuses, or has recently consolidated campuses;
- Whether the school offers degree programs to which students are admitted without having to demonstrate their aptitude on a test regularly used for admission decisions by public colleges, such as the SAT or ACT;
- Whether the school offers non-remedial program courses in English, but enrolls more than 10% of students who have limited or no English language proficiency in reading, writing, speaking or understanding;
- Whether the school enrolls more than 50% of its students in on-line programs;
- Whether there has been a recent change of ownership or control or a change in the business organization (from nonprofit to for-profit or vice versa);
- Whether the school’s audited financial statements indicate there may be issues with its financial health;
- Whether the school is unable to compensate its employees;
- Whether the school has recently been the subject of a *qui tam* action or an investigation, judgment, settlement or regulatory action involving a government agency; or
- Whether an accreditor has restricted the school’s institutional or programmatic accreditation, a government agency has restricted the school’s approval or subjected it to an injunction, or the U.S. Department of Education has placed the school on cash-reimbursement or heightened monitoring status.
APPENDIX F

KEY CHARACTERISTICS OF AN EFFECTIVE STUDENT COMPLAINT PROCESS

The most effective complaint processes include the following characteristics.

- accessibility, with information about how to submit a complaint by phone, online, and by mail clearly provided on the state agency and school website, as well as in writing to all students when they enroll in a for-profit school;
- thorough investigation of all complaints when the allegations, if taken as true, would constitute a violation of the statute or regulations;
- adequate investigative resources, including a minimum number of trained investigators, for example based on the total number of students enrolled in the schools it regulates, to handle complaints in a timely manner;
- the availability and appropriate use of investigative procedures and tools, including the review of prior student complaints, witness interviews, on-site document reviews, unannounced site visits at campuses or internship sites, and audits of relevant institutional data;
- an equal and adequate opportunity for each party to present relevant oral and documentary evidence in response to the other party’s evidence;
- a hearing and appeal process equally available to each party and conducted by impartial hearing officers with knowledge of the applicable statute and regulations, and an opportunity for each party to examine the other party’s evidence and compel witness attendance;
- a rule that oral and written testimony will be accepted only from witnesses who have personal knowledge of the matters to which they are testifying, and that the agency will make a credibility determination when there is conflicting testimony;
- written determinations for each complaint that state reasons underlying each determination, the statutory or regulatory basis for the determination, and a description of the evidence relied upon; and
- authority to require student refunds if a preponderance of the evidence demonstrates a statutory or regulatory violation, plus penalties or other appropriate relief in the case of systemic violations.
APPENDIX G

IN THEIR OWN WORDS: STORIES/QUOTES FROM FORMER FOR-PROFIT SCHOOL STUDENTS

The following stories were submitted by for-profit school students to NCLC’s Student Loan Borrower Assistance Project (www.studentloanborrowerassistance.org).

S.I., Winsboro, LA, age 43, regionally accredited national chain

“I have been a pharmacy technician for over 20 years. At age 35, I [enrolled] . . . hoping to earn a better job and a better income. My goal is a job in healthcare administration . . . . I graduated . . . in April 2010, with a bachelor of business administration degree . . . . Unfortunately, earning my degree has sent my life in a downhill spiral. I have been unable to find employment with my business degree . . . . In addition, I have only been able to find temporary and part time work as a pharmacy technician [and] I have to commute nearly 200 miles for this current job. I can not find work where I live. I have applied for many job positions—from housekeeping and cashiers to management. [H]iring managers for . . . administrative/management positions tell me I do not have enough experience. I feel my degree has hurt me more the helped me.

As well, my student loan debt has left a tremendous bruise on my personal life. [My boyfriend] has given me shelter through unemployment and he is the only reason I am not homeless at this point. I . . . spend $400 to $600 monthly [on] my 200 mile commute to my present employer . . . . Sometimes, I try to save money on lodging . . . by sleeping in my car. The loan payment on [the private loan my boyfriend] co-signed . . . is $200 monthly . . . . After these expenses, I have little money for food clothes and medical expenses.

I obviously made a grave mistake going to college and trusting my future with our nation’s higher educational system.

If my wages are garnished I will not have money to commute to work. One reason I am not finding employment is due to my poor credit record due to inability to pay student loans. Hiring managers in the business administration/management field tell me I do not have enough administration/management experience. Many hiring managers simply ignore my degree . . . .

[The for-profit school] simply taught text book material. They did not teach the hands on skills needed to find employment, such as MS Excel and analyzing business data. [The school] does not provide assistance with internships [or] job placement. When I notified [my campus] that I was unable to find employment with my . . . degree they did not return my phone calls.”
A.M., Chaska, MN, age 27, regionally accredited national chain
Owes $125,000 in federal and private student loans

“I went [to a for-profit school]. They stated a job placement program (98% job placement rate) along with aid during the last semester and after graduation to help students find jobs. I received emails from my career advisor for about 2 months, then every email I sent her went unreturned. I left school with a $16,000 federal loan and an $88,000 private loan. I had 6 months after my graduation until I had to start repayment. In the past 7 years (since graduating) the most I have made at any job was $14/hour (and this was an accounting job, my major was photography). Now I have 4 part time jobs, only one is photography related and my loans have jumped to $17,000 for my federal and $108,000 for my private. . . . I have become hopeless that my loans will ever be at a monthly payment that I can make and still pay for food, gas, and rent. . . . I wish i could tell all of the high school students of the US to research and be careful to check and double check what banks and schools promise, they don’t care about you or your well being, they are only in it for themselves and their company.”

P.R., Littleton, CO, age 60, parent of student, regionally accredited national chain
Daughter owes $15,000 in private student loans

“My daughter attended . . . [a for-profit school]. The school was purchased by [a large corporation] after she had started her course work. There were obvious changes in the quality of education as soon as the sale was final: teachers were let go; video equipment needed for school projects was not available or repaired; class size increased to the point there weren’t enough chairs for all students enrolled; the building was over-crowded and uncomfortable; required courses were not offered on a regular basis which extended the enrollment period and increased costs, [etc.] My daughter graduated with honors, but she was unable to find work in her field. Her former classmates have encountered the same problem, and none of these kids can pay back the huge [private] loans the college arranged with Sallie Mae. Sallie Mae (SM) made it impossible for my daughter to obtain forbearance or reduce payments during unemployment and under-employment. . . . Despite our best efforts, Sallie Mae turned the debt over to General Revenue Corp., a collection agency that SM reportedly owns. . . . The $6000 debt has now increased by $1000 for collection fees PLUS they increased the interest rate to 18.5%.”

M.K., Yorkville, IL, age 28, nationally accredited national chain
Owes $122,000 in private and federal student loans

“I have been struggling for 8 years now to pay off my student loans and I have not made a dent. Originally my interest only payment from Sallie Mae was to be just over $1200/month. . . . who can afford that?? . . . And that is interest only, it will take me a life time to pay off a loan like that. I have attempted EVERY repayment option that is available through Sallie Mae and they have denied me, with no reason given. . . . My degree has been no benefit. I blame most of this on the school. . . . They promised that after graduation they would help us find a job. I did not complete a 4 year degree to work in the mall
and make minimum wage! I am a single mom, make a below that average living and am struggling each & everyday to make each payment. Since when is it a life long punishment to get an education? Where is the relief . . . ?? The type of job I went to school for has additional requirements that were not provided by my school. I went to school in hopes of becoming a Buyer. There are additional certificates and computer training programs I need to pursue a position like this. They promised the world when enrolling, and in the end every promise was broken.”

M.M., Cleveland, TN, age 41, regionally accredited national chain (online program)
Owes $68,000 in federal and private student loans

“In 2004, I was coming out of a rather long divorce. I worked in a factory, and I wanted some way of improving my life and my future, I saw an ad for a new program that [a for-profit school] was starting up and I contacted them. They told me about their ‘placement programs for graduates’ and made the program sound irresistible. It was something that I could do and continue to work my regular job, so I took out a loan with Sallie Mae, and got started on the classes. Maybe 9 months into the program, I started to have some reservations about it, it seemed too easy, I expressed those reservations to one of my instructors and they encouraged me to stick with it, and I finished the program in 2008 right at the time of the financial crash when no one was hiring. Luckily, I already had a job, which I still have today no thanks to any experiences or ‘training’ that I might’ve gotten from my time at [the for-profit school]. So, after graduation, I spent a couple of weeks getting phone calls from the ‘placement department’ basically directing me to postings on Careerbuilder.com and other job boards like that for jobs which weren’t even related to the degree which I’d just completed from their organization, and NONE of those jobs paid better than the job which I already had. All of it was a waste!

Frankly, I don’t think that they should offer the types of degrees in areas where there is not an established industry for graduates to be placed in. I interviewed for several positions that were related to my degree, and in ever[y] interview I found that I was having to explain what the degree was, and what the school was. I felt grossly underexperienced to enter a job in that field after graduating the program. Today, I just feel ashamed to even admit to having gone there. I couldn’t even use it to advance into the marketing departments here at the company that I am presently working for after being here for five years!”

D.W., Carteret, NJ, age 56, nationally accredited school with 2 campuses
Owes $10,000

“I sign up with [a for-profit school], with promise of financial aid for the course I took, Micro Soft Office, the course is barely 6 months long, they offered [me] a student loan of $3000 . . . and I took it, after completing the course with a B average they told me that if I pass on time the course would be free. I completed the course. later I found out that nothing the school said was true with out my knowing they took out a $10,000 student loan on my behalf for a less than 6 month course, after passing the course nothing was free, as they said plus financial aid, they did not have [an] internship sit aside for me so
I did not get that. What I need to know is how can I stop this from happen to others this school is ripping people off, and the government. Can someone help me with this this is a bad experience, for anyone. Now I’m 10,000 dollars in debt.

[The for-profit school] only teaches the basics, and not how to type, if you come with no knowledge of the keyboard they do not give lesson on it. they promise to train you in (mouse) Micro Soft Office User Specialist with a certificate upon completion, but Graduation is over one to two years after completion, so what they suggest is that you go back and take another course with them in a different field, which is what students are doing, because of a promise of a check every two weeks for attending their school. They also say if you pass you won’t have to pay that back, but you do.”

S.S., Fremont, MI, age 37, enrolled in 2003, nationally accredited national chain (online program)
Owes $65,000 in private and federal loans

“In 2003, my USMC Reserve unit was activate for Operation Enduring Freedom. When I got back, my contract had expired and I was out of the Marines without an option to re-enlist. My job was going to be phased out so I went to a technical school in order to get a technology degree in order to save my job. Their ‘job placement’ programs consisted of job fairs that had entry level positions not in the IT field. The programs did not provide any opportunity for experience (like internships) and was not good enough to get positions that I was told the course would allow me to do.

Since I was in the reserves . . . I did not get any G.I. Bill benefits. When talking to the financial aid department, I was told if I completed 4 years, my student loan payments would be approximately $200 per month. The first bill I received was for over $700. I repeatedly tried to work with Sallie Mae, but every time I do, they utilize . . . collection tactics and will do nothing to work with me.”

A.M., Fairfield, CT, age 31, nationally accredited national chain
Owes $80,000 in private and federal loans

“I took a private student loan to continue my education, after finishing my medical assistant program I was told by my school I was to start making $18 per hour, that never happened. I graduate in 2005 and now I am making $15 per hr. and I am working as registrar in the emergency department. Have 2 small children and unemployed husband. I defaulted my private student loan and I am desperate, I don’t know how to handle the situation, I tried in the past, I called American Education Services many time to tell them my situation and ask them to make my payments affordable but they did not want to hear it. Now I defaulted and who knows what is going to happen. I am struggling to put food on the table for my kids, it is so frustrated. I am so afraid that they will take money from my paycheck and I won’t be able to feed my kids pay my rent my car insurance and all the things I need to make a living.”
S.B., Akron, OH, enrolled in 2008, nationally accredited school with several campuses

“In 2008, when I was 21 years old, I heard about a ‘career school’ . . . that promised a job in the field I studied. At the time I thought this was a great idea. I had no job, was living on my own and since I didn’t do well in High School this school seemed perfect. I visited the school and they gave me a great ‘salespitch’ about their school. They promised an externship, a job, that their ‘National accreditation’ could be used at ANY college or University, that the loan I would receive wouldn’t kick in until six months after graduation and that if I didn’t have a job it wouldn’t affect me. They showed me a ‘document’ of success stories and at the time it sounded ideal for my situation. I would be in school for 9 months and come out making ‘tons’ of money. Who wouldn’t sign up for that?

The school, hired students to be teachers, we didn’t learn anything as far as hands on medical care. New people were being enrolled every two weeks and no one knew why. I graduated with honors, had a 4.0 GPA and had to find my own interviews. The school NEVER helped me with anything, employers wouldn’t even consider me when they heard I graduated from [the for-profit school]. . . . The school promised to get us an externship and never did. They promised ‘job placement’ and never helped us find a job. . . . We were robbed of a real education . . . It was a joke, a scam and this school should be shut down. And the students should be free from loan burdens since we didn’t even get an education.

[Fast forward to today (3/24/2013) Im married, my husband has cancer, I NEVER received a job from a school that promised me one. . . . I take care of my husband who is a disabled Veteran. . . . We live on VA assistance. Now, I’m trying to get into a University to better mine and my husbands future. . . . I find out from the University I’m trying to get into, that . . . NONE of the work and time I put into the school will be transferred over to the University. How can this be, when [the for-profit school] told me, that I can transfer my transcripts to any school I wanted since they were ‘Nationally Accredited’ . . . The only thing I’m trying to do is better my life, take care of my disabled husband and try to get out from underneath a loan from a school that lied to me. . . . I didn’t purposely default on my loan. I was a victim to a school that did nothing but lie and ruin my life in the long run. It has literally turned into, battle after battle. All I want is a way out.”

G.S., Mason City, IA, age 58, enrolled in 2007, nationally accredited national chain

Owes more than $43,000

“I went to [a for-profit school] to learn how to be a Medical Assistant. . . . I had to change from the Medical Assistant to Interdisciplinary Studies, because I couldn’t do the clinical. After I graduated, the school didn’t help me find a job. I didn’t know what type of jobs that Interdisciplinary Studies was for . . . Someone at [the school] said they were going to send me a job packet, but they never did. . . . I work for two temp services with limited hours. I have a lot of trouble keeping up with all of the bills. I recently caught up my heating bill. . . . I think that the degree was worthless and didn’t help me at all. I
think the loans are pretty expensive and unaffordable. I’m looking for some kind of help to help with the massive debt the student loans created for me—which I can’t afford.”

_A.M., Tucson, AZ, age 33, nationally accredited national chain_

Owes over $100,000 in private and federal student loans

“I graduated from culinary school in 2004. I was told chefs make GREAT money, just sign on the line. After several low paying jobs, I found myself pregnant, unemployed, and out of forbearance options . . . When I asked Sallie Mae for help . . . they told me I could consolidate my loans with a cosigner and a payment of several thousand dollars. With a newborn, I was trying to get back on my feet, and this was not an option. I was told this was my only option. Time passed, and eventually I was served with the legal documents from the law firm my loans were sold to . . . Today, I take care of my two kids, by myself, and am having 25% of my income from my full time employer garnished. I was under the impression that I would be a ‘Chef’ when I graduated and I would be making good money . . . no one told me it would be YEARS before I made a living wage.”

_K.T. North Hills, CA, age 29, nationally accredited national chain_

Owes $59,000 in federal and private student loans

“Before I started my education, I was told by the recruiters that all their students found jobs after graduation. They said that they have job placement program that will help you find jobs. They also said they have a career center that will help students as long as they want. After graduating with AS degree, they wanted me to get my Bachelor. They said it will cost me around $90k for my Bachelor. I signed up for the Bachelor Program but then I got out before school started because my previous loan was too much for me to pay. The Registrar and many representatives have asked me many times to go for my Bachelor. They said that I shouldn’t worry about the loan because I will get a job after graduating. I accumulated $50k school loans. After 6 months of graduation, I was unable to find a job. I went back to a community college. Many schools did not accept my credits. However, I was told by the Register that my credits are transferable . . . [the for-profit school] did not help me find a job like they said. They send out weekly emails with job offers but the jobs are not even in related in our fields . . . For the past 3 years, I’ve been trying to find a job in my field but I have no luck.”
L.C., 34, Holyoke, MA, nationally accredited school with multiple campuses in three states

“My story goes as thus, I attended [a for-profit school] for medical assisting program. Upon enrollment it was said that I would be placed in an externship for training, and that 90% of their students get hired by the offices in which the students get placed. It was also stated that I would be able to find employment as a phlebotomist or an assistant in pharmacies. After getting certified and reworking my resume a few times, I was still unable to find employment. After two and a half years I gave up the pursuit and settled with whatever employment I could find. Then I find out that I would have to take an entire different set of classes and training as well as a different exam, to be eligible for phlebotomy and a pharmacist’s tech. I was informed that students from [the for-profit school] were looked down upon. Most medical offices wanted nothing to do with their students due to lack of experience.”
Legal Aid Coalition Comments on Proposed Regulations

Attachment C
Wake-Up Call to State Governments: Protect Online Education Students from For-Profit School Fraud
December 2015

Note: This brief updates Step 2 of the National Consumer Law Center’s Ensuring Educational Integrity: 10 Steps to Improve State Oversight of For-Profit Schools (June 2014) available at: http://tinyurl.com/muslfjb.

Distance online education is now the fastest growing segment of higher education.1 Most states, however, have abdicated their responsibility to protect the increasing number of online education students from predatory and illegal practices of for-profit education companies. Most allow out-of-state companies to enroll online students without complying with important state consumer protections for postsecondary students, as long as the companies have no physical presence in state. These states either exempt these schools from oversight or have signed weak state authorization reciprocity agreements that prevent state enactment or enforcement of postsecondary education consumer protection laws.

ONLINE FOR-PROFIT SCHOOL STUDENTS NEED AND DESERVE STATE PROTECTION

Thousands of online education students are vulnerable to misleading marketing, low-value programs, and fraud. Yet, these students lack the following protections, among others, which many states provide for students who attend brick-and-mortar schools:

- Reimbursements from state protection funds for economic losses due to sudden school or program closures;
- 100% refunds for students who cancel before the first day of class;
- Private student loan refunds in the event they withdraw before completing their educations; and
- The right to file complaints with their states’ oversight agencies.

Online education students are equally deserving of protection from unscrupulous for-profit companies. There is no reason to conclude that for-profit online education schools are less likely to engage in the types of deceptive practices used by brick-and-mortar schools.

- As highlighted in the table on page 2, a majority of the largest online education schools are owned and operated by the same for-profit companies that have been the subject of multiple law enforcement investigations and actions.
- A 2012 investigation by the U.S. Senate Health, Education, Labor and Pensions Committee detailed extensive misleading practices at schools owned by all of these corporations.2
Both Bridgepoint Education, Inc. and Career Education Corp. entered multi-million dollar settlements with state attorneys general based on allegations that they engaged in unfair and deceptive practices with respect to their online programs.  

In November 2015, Education Management Corp. agreed to a $100 million settlement with the Department of Education and 39 states for engaging in illegal recruiting and other illegal practices. As of fall 2015, ITT Educational Services’ financial status is being closely monitored by the Department of Education and has been sued by the Consumer Financial Protection Bureau for unfair and deceptive business practices. Both of these schools offer extensive online education programs that are protected by reciprocity agreements or are exempt from state oversight.

STATES SHOULD TAKE ACTION TO PROTECT ONLINE STUDENTS

Based on the National Consumer Law Center’s review of state physical presence requirements, as of July 2013, only nine states regulate degree-granting and non-degree granting for-profit schools that offer online education but have no in-state physical presence. Twelve other states regulate a subset of schools that offer online education but have no physical presence. In the days when online programs were non-existent or rare, it may have been reasonable for states to conclude that online education oversight was unnecessary. But times have changed.

The U.S. Department of Education has recognized the risk that the lack of state oversight poses to the federal financial aid program. It is currently considering regulations that
would require schools solely offering online education programs to obtain some type of authorization from each state where the programs are offered. To make it easier for schools to obtain state authorizations, the National Council for State Authorization Reciprocity Agreements (NC-SARA) and four higher education regional compacts have drafted a cooperative agreement for the purposes of online education oversight and approval, applicable to accredited degree-granting schools.

The four State Authorization Reciprocity Agreements (the SARAs) essentially provide that if the state oversight agency where the school is physically headquartered (the “home state”) approves a school, then the states where the school offers online education programs (the “distant states”) must adopt the home state’s approval as long as the school lacks an in-state physical presence.

As currently drafted, the SARAs largely ignore consumer protection issues. Chief among the SARAs’ deficiencies is the requirement that both home and distant states waive their consumer protections and minimum standards specifically applicable to for-profit schools with respect to out-of-state online students. A school offering online education programs need only comply with the SARAs’ minimal standards and disclosure requirements. Even a home state may not apply or export statutory consumer protections to online education emanating from their state and conducted across state lines.

Numerous other serious problems with the SARAs exist and have largely gone unnoticed by state legislatures. As of November 29, 2015, 34 states, many through authorizing legislation with little or no debate, have joined SARA. In addition, the leaders of public and private non-profit colleges have led the efforts to pass SARA authorizing

---

**Lack of State Oversight of Online Education Programs Leaves Borrowers to Fend for Themselves**

In 2010, Shari B. (name changed to protect her privacy) had been unemployed for more than six years. A single mother of four living in California, she was attracted to an advertisement about a business associate degree program. The program was offered online by Centura College, a for-profit school headquartered in Virginia. Shari called the school and signed an enrollment agreement several days later. After enrolling, Shari discovered that her home Internet connection did not work well enough for participation in the online program. She informed Centura College by phone and in writing of her decision to cancel her enrollment agreement. She had never attended a single class or even logged onto the school’s website.

In mid-2014, Shari received a call from a lawyer. The lawyer told Shari that if she didn’t agree to start making monthly payments, her wages would be garnished. Shari was surprised and discovered that, although she had not been served with any complaint, a default judgment of $3,000 had been entered against her. The plaintiff was a debt buyer that claimed it was enforcing a debt Shari owed to Centura College.

Because it has no physical presence in California, Centura College is exempt from oversight by the Bureau for Private Postsecondary Education. It is also not required to comply with California’s 7-day cancellation law, which allows students to cancel within 7 days and receive a 100% refund. In addition, because Centura College is an accredited school that has existed in Virginia for over 10 years under the same ownership, it is exempt from oversight by the State Council of Higher Education for Virginia. With no oversight agency to which she may address a complaint, Shari sought the assistance of a legal aid attorney.
legislation, without regard to the serious consequences for low-income for-profit school students.

The SARAs’ unbalanced and dangerous provisions are not set in stone. Reciprocity agreements may be useful, but only if they include strong consumer protections and provide for robust state oversight. In order to protect online students’ and states’ interests, member states, and those that are considering participation could demand that the SARAs be revised as recommended (see page 5). States should enter into reciprocity agreements only if they are revised to provide states with sufficient authority to protect their citizens.

ENDNOTES

6. See www.aionline.edu (EDMC Art Institute of Pittsburg Online); www.itt-tech.edu/onlineprograms and www.dwc.edu/onlineprograms (ITT Education Services online programs).
7. These states are Alabama, Georgia, Indiana, Kansas, Montana, South Dakota, Utah, Wisconsin, and Wyoming. See National Consumer Law Center, Student Loan Law, Appx. M (Supp. 2016).
8. These states are Arkansas, Delaware, Iowa, Kentucky, Minnesota, Nebraska, New Jersey, Oklahoma, Rhode Island, Texas, Virginia, Washington. See id.
State Authorization Reciprocity Agreements (SARA) provisions are not set in stone. To more equitably address consumer, state, and school interests, states should enact legislation allowing state agencies to sign onto SARAs as long as they are revised as follows. State oversight agencies may also insist on these revisions before applying for membership or after they have become members.

<tr>
<th>SARA Provision</th>
<th>Problem</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Accreditation in Lieu of State Standards(^1)</td>
<td>The home state(^2) must accept institutional accreditation as sufficient for approving schools’ participation in SARA. Distant states must accept the home state’s approval. Under SARA, neither the home state nor any distant state may require more than accreditation in most circumstances.</td>
<td>Approval criteria should be expanded to ensure that a school provides quality education and does not engage in deceptive or illegal practices. Criteria should include minimum and audited graduate job placement rates for all programs that a school represents will lead to an occupation.(^3)</td>
</tr>
<tr>
<td>Waiver of State Consumer Protection Laws</td>
<td>All states, both home and distant, must waive consumer protection laws with respect to covered schools and students.(^4) It is not even clear if a state retains authority to enforce its general consumer protection laws against SARA schools.</td>
<td>State consumer protection laws that specifically apply to for-profit schools should cover all online for-profit education schools that market to state residents, regardless of physical presence.</td>

<tr>
<td>Treatment of All Type of Schools as If They Pose the Same Risk to Students</td>
<td>SARA requires a state to sign onto SARA for all types of schools (public, private non-profit, or for-profit) or none.</td>
<td>States should be able to sign onto SARA for some types of schools, but opt out for types of schools that pose a higher risk to their residents.</td>
</tr>
<tr>
<td>Lack of Consumer Protections</td>
<td>SARA only requires that schools provide accurate information to students regarding a number of areas, including refund policies and accreditation. States may not apply more stringent consumer protection provisions to SARA schools.(^5)</td>
<td>SARA should require schools to comply with all consumer protections of each state in which they market, including prohibitions targeted to unfair and deceptive business practices, disclosure requirements, private causes of action, language requirements, and requirements for enrollment agreements and other important documents.</td>

\(^1\) National Council for State Authorization Reciprocity Agreements, “State Authorization Reciprocity Agreements: Policies and Standards” (July 10, 2015). All four regional SARAs include these provisions and are available at each of the following websites: [www.wiche.edu](http://www.wiche.edu), [www.mhec.org](http://www.mhec.org), [www.nebhe.org](http://www.nebhe.org), [www.sreb.org](http://www.sreb.org).

\(^2\) The “home” state is defined as the state where the school maintains its legal domicile.

\(^3\) For more on minimum job placement rates, see National Consumer Law Center, [Ensuring Education Integrity: 10 Steps to Improve State Oversight of For-Profit Schools](http://www.cla.org/content/ensuring-education-integrity-10-steps-improve-state-oversight-for-profit-schools) (June 2014).

\(^4\) While a home state may apply stricter consumer protections to in-state online students that enroll in schools domiciled in-state, it may not export those consumer protections to out-of-state online students of that school. The school need only comply with SARA for out-of-state online students.

<th><strong>SARA Provision</strong></th>
<th><strong>Problem</strong></th>
<th><strong>Solution</strong></th>
</tr>
</thead>
</table>
| **Inadequate Student Protection Fund Requirements** | While SARA states that each state must ensure that closed school students are able to receive the education they contracted for or financial compensation, it is unclear whether states are allowed to impose requirements on SARA schools to pay into state protection funds, provide bonds, or provide other financial assurance in order to fund these financial protections.  

6 In addition, the laws of some states that have been admitted to SARA do not allow the use of state protection funds to reimburse out-of-state distance education students. See, e.g., Ariz. Rev. Stat. Ann. § 32-3075(b) (“Any person injured by a private postsecondary education institution ceasing operation is eligible to submit a claim against the fund unless the person is not a resident of this state and is enrolled in distance learning instruction.”) (emph. added.). Other member states do not have any bond provisions or protection funds to compensate harmed closed school students. See CFED, Assets & Opportunity Scorecard, For-Profit School Regulation, http://scorecard.assetsandopportunity.org/latest/measure/for-profit-school-regulation (accessed on Dec. 2, 2015). | SARA should require each member state to maintain a student protection fund sufficient to compensate the financial losses of all students impacted by school closures, at a minimum. |
| **No Refund or Cancellation Provisions** | SARA schools do not have to comply with state law refund or cancellation provisions. | SARA should require schools to comply with state refund and cancellation provisions for each state in which they market. |
| **Programs that are Represented Lead to Licensed Occupations but Do Not Qualify Graduates for Licensure** | SARA allows schools to offer programs that lead to a licensed occupation in distant states, even when the programs do not qualify students for licensure in those states. SARA only requires that schools disclose that the program does not meet state licensure requirements. | SARA should prohibit schools from enrolling students in programs that lead to a licensed occupation when the programs do not qualify students for licensure in their states. |
| **Inadequate Student Complaint Procedures** | SARA requires students to first try to resolve a complaint with the school. Only after this may a student submit a complaint to the home state. Although the distant state may help to resolve the complaint, only the home state may make the final decision. | SARA should provide states with the right to accept, investigate and act on complaints from their residents. Students should not be required to submit a complaint to the school before they may file a complaint with their states. Schools should be required to cooperate with any state’s investigation. |
| **No Investigative or Enforcement Powers for Distant States** | Distant states may only take action for SARA violations (or regarding student complaints) in two ways: (1) either asking the home state to take action (and, if unhappy with the decision, appealing to regional compact), or (2) withdrawing from SARA for ALL schools. | Each state should maintain the authority to limit or deny approval, or take any other appropriate action, in the event it determines that a school has failed to meet the minimum SARA standards, its own minimum standards, or violated any state law or regulation. In addition, each state should be able to review documents, conduct site visits, issue subpoenas, and use other investigative tools it deems necessary to grant or continue approval through SARA. Other important state powers include:  
- Record retention and reporting requirements.  
- Notification requirements regarding change in ownership, adverse accreditor actions, etc.  
- Fee requirements to fund its work. |
| **Overly Broad Definition of Physical Presence** | States must use SARA’s overly broad definition of “physical presence” to determine which schools are covered. The definition excludes a number of activities which should lead to state oversight. For example, in-state recruiting does not constitute a physical presence. For-profit SARA schools may pay unlicensed recruiters to target students in distant states, while maintaining their immunity from state consumer protection laws. | SARA’s definition should be revised to better delineate when a state has a legitimate interest in regulating activities conducted in its borders, such as recruitment activities. |
